1.4.10 HVAC actuator.....	56

1. Applications

Using one of the room panel applications you can capture and control different HVAC systems. The following applications/room panels are available:

Room panel	Application	NodeObject	Command Module	Switch	ScenePanel	Occupancy Controller	DewPoint Controller	SpaceComfort Controller	Thermo Controller	HvacActuator	RelHumidity Sensor
dialog 8	SC341508EC_11	1	1	8	1	1	1	1	1	-	-
clima LCD	SC231505EC_11	1	1	8	1	1	1	1	1	-	-
clima RO	SC231301EC_11	1	1	4	1	1	1	1	1	-	-
clima RCM	SC231302EC_11	1	1	4	1	1	1	1	1	-	-
clima RCM-FC	SC231334EC_01	1	1	10	1	1	1	1	1	3	-
tactio S / S-Rh	SC341701EC_01	1	1	8	1	1	1	1	1	-	1
tactio L / L-Rh	SC341708EC_01	1	1	8	1	1	1	1	1	-	1

The software is divided into logical objects in accordance with LonMark™ Interoperability Guidelines.

1.1. Application data

You can select the desired application in the spega device template manager. All the required application files, resource files and plug-ins for the relevant project will be loaded.

Application	SC341508EC_11
Room panel	dialog 8
Application files	SC341508EC_11.APB SC341508EC_11.NXE SC341508EC_11.XIF SC341508EC_11.XFB
Ressource files	econtrol Ressource Files required, from version 2.50 onwards
Plug-ins	Room panel device plug-in, object plug-ins

Application	SC231505EC_11
Room panel	clima LCD
Application files	SC231505EC_11.APB SC231505EC_11.NXE SC231505EC_11.XIF SC231505EC_11.XFB
Ressource files	econtrol Ressource Files required, from version 2.50 onwards
Plug-ins	Room panel device plug-in, object plug-ins

Application	SC231301EC_11
Room panel	clima RO, nova RO
Application files	SC231301EC_11.APB SC231301EC_11.NXE SC231301EC_11.XIF SC231301EC_11.XFB
Ressource files	econtrol Ressource Files required, from version 2.50 onwards
Plug-ins	Room panel device plug-in, object plug-ins

Application	SC231302EC_11
Room panel	clima RCM, nova RCM
Application files	SC231302EC_11.APB
	SC231302EC_11.NXE
	SC231302EC_11.XIF
	SC231302EC_11.XFB
Ressource files	econtrol Ressource Files required, from version 2.50 onwards
Plug-ins	Room panel device plug-in, object plug-ins

Application	SC231334EC_01
Room panel	clima RCM-FC, nova RCM-FC
Application files	SC231334EC_01.APB
	SC231334EC_01.NXE
	SC231334EC_01.XIF
	SC231334EC_01.XFB
Ressource files	econtrol Ressource Files required, from version 2.50 onwards
Plug-ins	Room panel device plug-in, object plug-ins

Application	SC341701EC_01
Room panel	tactio S, tactio S-Rh
Application files	SC341701EC_01.APB
	SC341701EC_01.NXE
	SC341701EC_01.XIF
	SC341701EC_01.XFB
Ressource files	econtrol Ressource Files required, from version 2.54 onwards
Plug-ins	Room panel device plug-in, object plug-ins

Application	SC341708EC_01
Room panel	tactio L, tactio L-Rh
Application files	SC341708EC_01.APB
	SC341708EC_01.NXE
	SC341708EC_01.XIF
	SC341708EC_01.XFB
Ressource files	econtrol Ressource Files required, from version 2.52 onwards
Plug-ins	Room panel device plug-in, objec plug-ins

The software complies with LonMark™ Interoperability Guidelines. When using LNS-based integration tools we recommend the use of the resource files listed.

1.2. Automation functions

You can achieve a wide range of various automation functions with the spega room panels. Their availability depends on which room panel is used and how the objects are configured.

1.2.1 VDI3813 – Functions

Sensor functions

- Window monitoring
- Air temperature measurement
- Relative humidity measurement

Operating and display functions

- Actuate light
- Actuate sunshade
- Actuate drive
- Adjust temperature setpoint
- Select room utilization type
- Signal presence

Actuator functions

- Control drive actuator

Application functions

- Occupancy evaluation
- Sequence control
- Manipulated value limiting
- Control via room utilization types
- Automatic thermal control
- Energy mode selection
- Energy mode selection with start optimization
- Setpoint calculation
- Function selection
- Temperature control (heating/cooling)
- Air quality control
- Fan control
- Night time cooling

1.2.2 Extended functions

Sensor functions

- Measurement of relative Humidity

Application functions

- Dew point calculation

Object behaviour

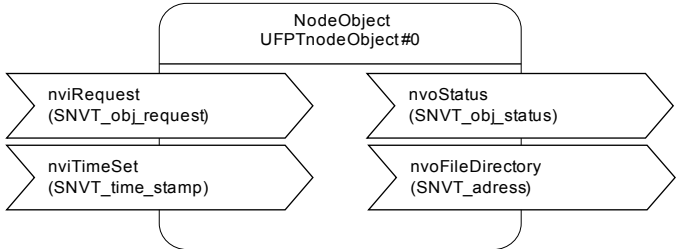

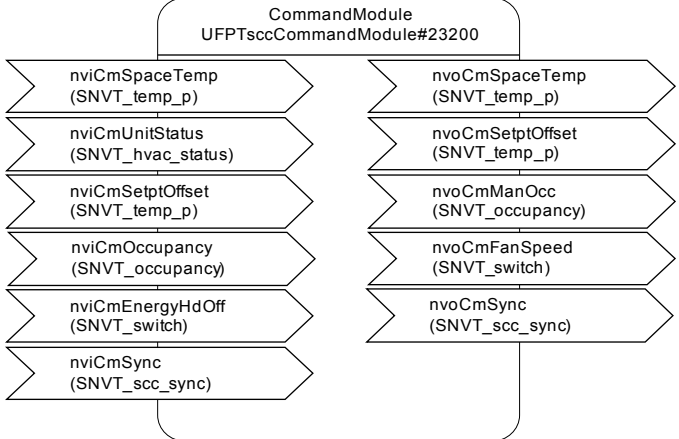

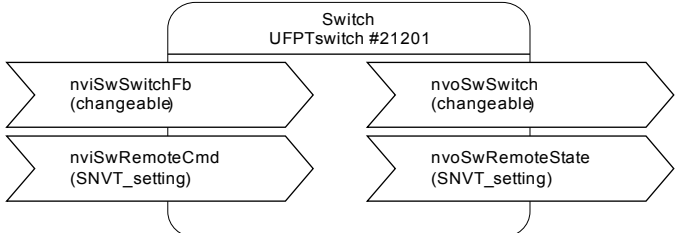

- Action in the event of communication faults
- Action following resumption of power supply or reset
- Switchable network variable types
- Transmission response for output network variables
- Valve rinsing
- Pulse width modulation for actuators

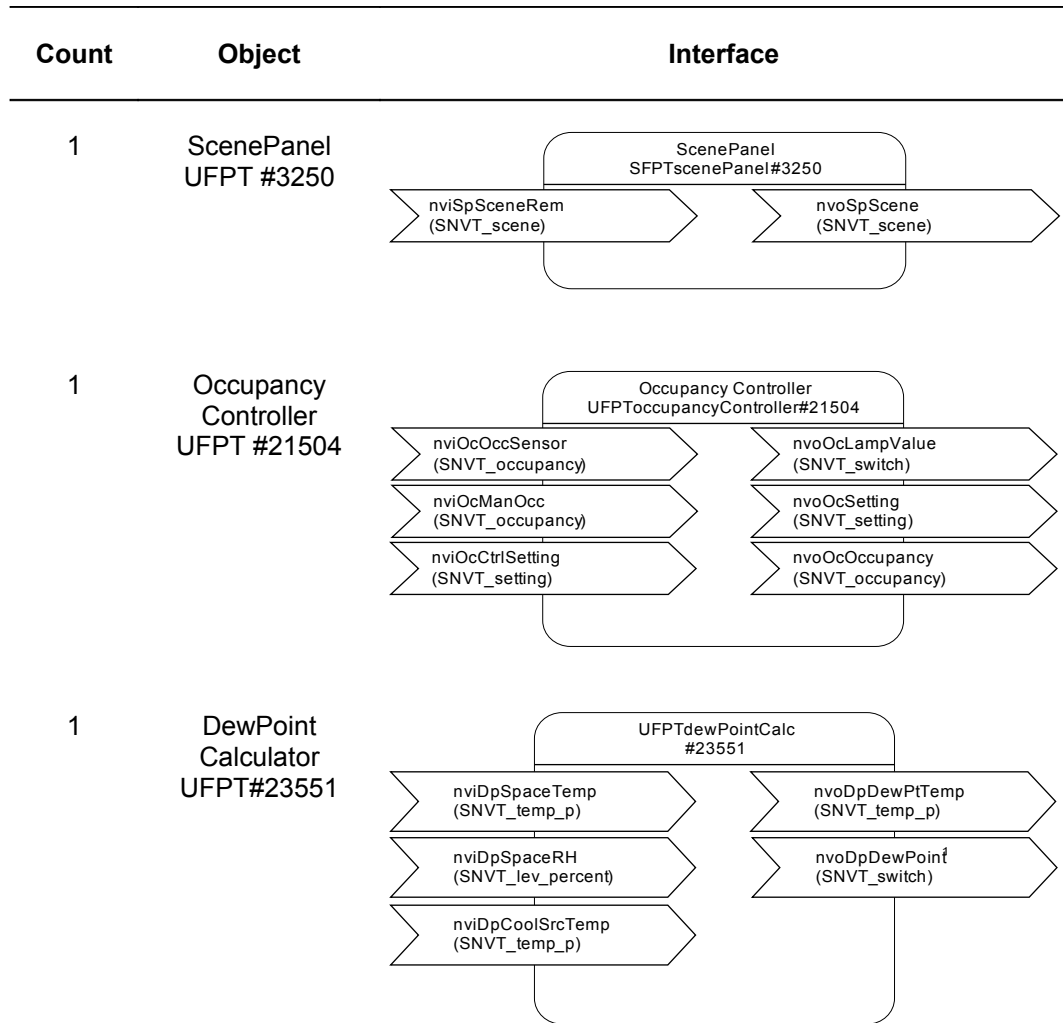

1.3. Device templates - Interfaces

This section contains a brief description of the device templates of the applications available for the device.

1.3.1 Applications

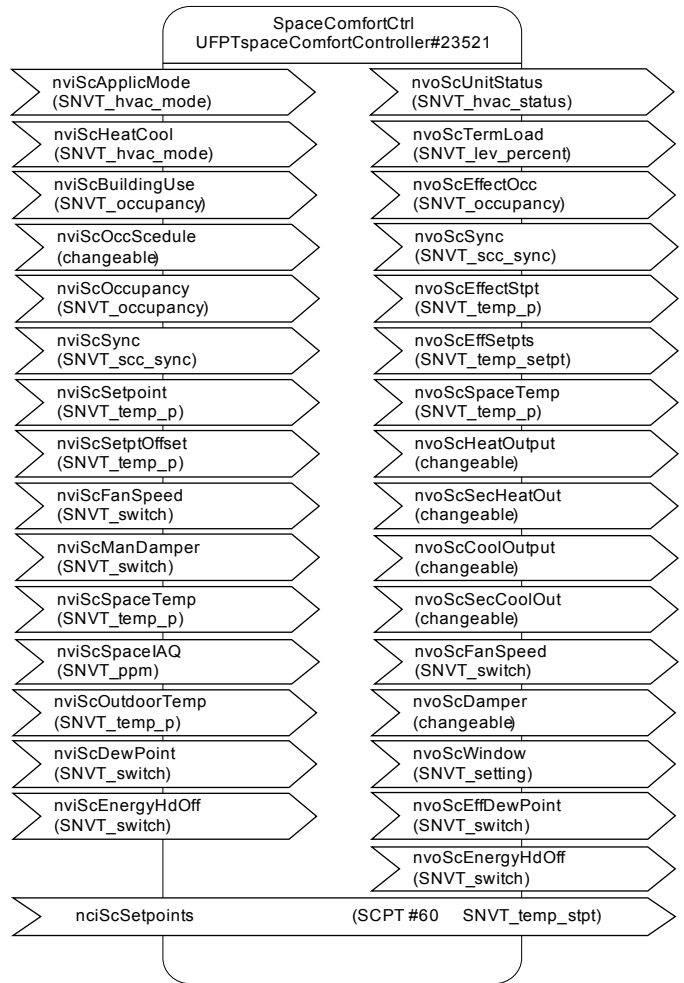

SC341508EC_11

Count	Object	Interface
1	NodeObject UFPT #0	 <p>The diagram shows a rounded rectangle representing the NodeObject UFPT #0 interface. On the left side, two arrow-shaped boxes point towards the interface: 'nviRequest (SNVT_obj_request)' and 'nviTimeSet (SNVT_time_stamp)'. On the right side, two arrow-shaped boxes point away from the interface: 'nvoStatus (SNVT_obj_status)' and 'nvoFileDirectory (SNVT_address)'.</p>
1	CommandModule UFPT #23200	 <p>The diagram shows a rounded rectangle representing the CommandModule UFPT #23200 interface. On the left side, six arrow-shaped boxes point towards the interface: 'nviCmSpaceTemp (SNVT_temp_p)', 'nviCmUnitStatus (SNVT_hvac_status)', 'nviCmSetptOffset (SNVT_temp_p)', 'nviCmOccupancy (SNVT_occupancy)', 'nviCmEnergyHdOff (SNVT_switch)', and 'nviCmSync (SNVT_scc_sync)'. On the right side, five arrow-shaped boxes point away from the interface: 'nvoCmSpaceTemp (SNVT_temp_p)', 'nvoCmSetptOffset (SNVT_temp_p)', 'nvoCmManOcc (SNVT_occupancy)', 'nvoCmFanSpeed (SNVT_switch)', and 'nvoCmSync (SNVT_scc_sync)'.</p>
8	Switch UFPT #21201	 <p>The diagram shows a rounded rectangle representing the Switch UFPT #21201 interface. On the left side, two arrow-shaped boxes point towards the interface: 'nviSwSwitchFb (changeable)' and 'nviSwRemoteCmd (SNVT_setting)'. On the right side, two arrow-shaped boxes point away from the interface: 'nvoSwSwitch (changeable)' and 'nvoSwRemoteState (SNVT_setting)'.</p>

1.4. Description of software objects

The individual functional objects are described in greater detail below.

1.4.1 Node object

Network interface

* not at all room panels available
 ** only at room panels with time- and date display available

Network variables

Input variables

<p>nviRequest Default network input for receiving management commands</p> <p style="padding-left: 40px;">Type: SNVT_obj_request</p> <p style="padding-left: 40px;">Presetting: {0, RQ_NORMAL}</p>	<p>nviTimeSet Default network input for receiving actual date / time (synchronisation)</p> <p style="padding-left: 40px;">**</p> <p style="padding-left: 40px;">Type: SNVT_time_stamp</p> <p style="padding-left: 40px;">** only at room panels with time- and date display available</p>
<p>nviConfig* Communication interface for plug-ins</p> <p style="padding-left: 40px;">Type: UNVT_config</p> <p>* not at all room panels available</p>	

Output variables

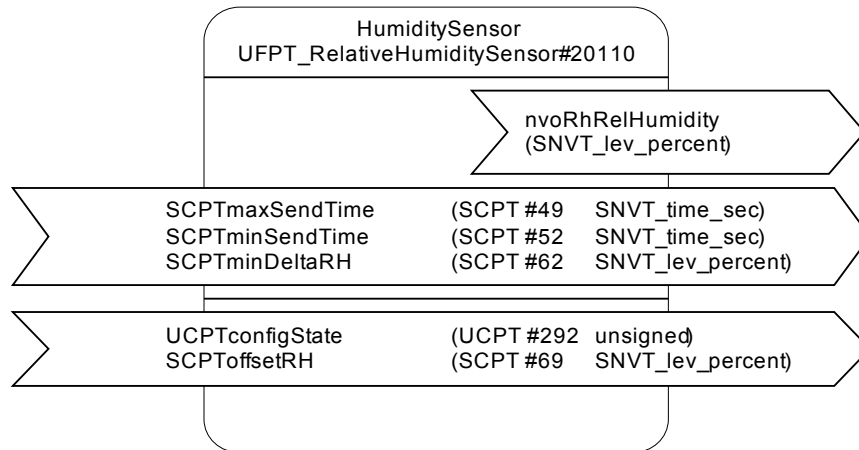

nvoStatus	Output of status data for received request management commands via <i>nviRequest</i>	* <i>not at all room panels available</i>
	Type: SNVT_obj_status	
	Transmission: On request via <i>nviRequest</i>	
nvoConfig*	Communication interface for plug-ins	
	Type: UNVT_config	
	Transmission: on request via <i>nviConfig</i>	
nvoFile Directory	Provides the start address of the config file directory of the device	
	Type: SNVT_address	
	Transmission: During file transfer or polling	

Configuration properties

SCPTdevMaj Ver	Major version of the application	SCPTlocation	Extended description of the device location
	Type: SCPT #165 (read only) unsigned short		Type: SCPT #17 SNVT_str_asc
	Value: Application specific	Presetting:	{ 0 }
SCPTdevMin Ver	Minor version of the application		
	Type: SCPT #166 (read only) unsigned short		
	Value: Application specific		

1.4.2 Measurement of relative humidity

Network interface

Network variables

nvoRhRel Humidity
Relative Humidity

Type: SNVT_lev_percent (SNVT #81)

Range of values: 0,00 – 100,00%

Presetting: Invalid value {163,835 %}

Transmission: Adjustable via
SCPTmaxSendTime,
SCPTminSendTime and
SCPTminDeltaRH

Configuration properties

Parametrization of network variables

SCPTmaxSend Time	Maximum period of time between sending two telegrams	SCPTminSend Time	Minimum transmission interval before re-sending a value
	Type: SNVT_time_sec (SCPT #49)		Type: SNVT_time_sec (SCPT #52)
	Range of values: 0,0 ... 6553,4 Seconds		Range of values: 0 No periodic resend
	Presetting: 0,0 Seconds {0}		0,5 - 6553,0 Seconds
			Presetting: No periodic resend {0}

SCPTminDeltaRH Minimum of absolute value
change causing the value
to be re-sent

Type: SNVT_lev_percent
(SCPT #62)

Range of values: 0,00 ... 10,00 %

Presetting: 0% {0}

Parametrization of functional object

UCPTconfig State Only used by Plug-in

Type: unsigned short

Range of values: 0 - 255

Presetting: 255 {255}

SCPToffsetRH Measurement offset to
calibrate the sensor

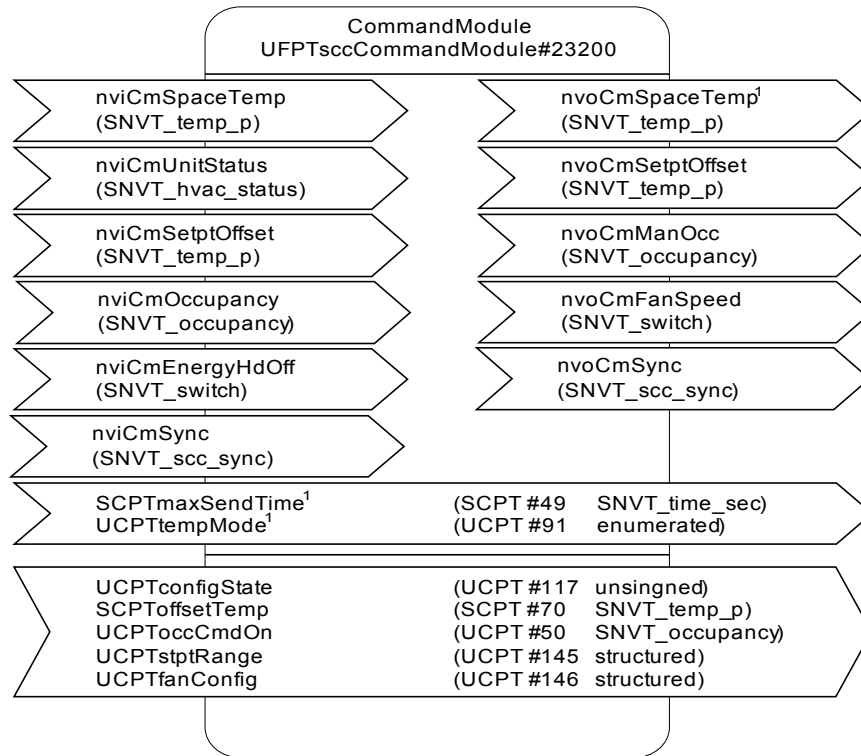

Type: SNVT_lev_percent
(SCPT #69)

Range of values: 0,00 – 20,00%

Presetting: 0,00 % {0}

1.4.3 Operating module

Network interface

Network variables

<p>nviCmSpaceTemp Room temperature to show on display Type: SNVT_temp_p Range of values: SNVT_temp_p Presetting: Invalid value {32767}</p>	<p>nviCmUnitStatus Room temperature controller states for synchronization and display Type: SNVT_hvac_status Range of values: SNVT_hvac_status Presetting: Invalid values {HVAC_NUL, 32767, 32767, 32767, 32767, 32767, 255}</p>
<p>nviCmOccupancy Occupancy feedback for synchronization of toggle buttons and for display Type: SNVT_occupancy Range of values: SNVT_occupancy Presetting: Invalid value {OC_NUL}</p>	<p>nviCmSync Feedback from spega SpaceComfortController and synchronization between spega CommandModul objects Type: UNVT_scc_sync Range of values: UNVT_scc_sync Presetting: Invalid values {32767, HVAC_NUL, HVAC_NUL, 32767, 32767, 255, 255, 255, 255, 255, 255, 255, 255}</p>
<p>nviCmSetptOffset Setpoint offset feedback for synchronization and display Type: SNVT_temp_p Range of values: SNVT_temp_p Presetting: Invalid value {32767}</p>	

<p>nvoCmSpaceTemp</p> <p>Temperature measurement value</p> <p>Type: SNVT_temp_p</p> <p>Range of values: SNVT_temp_p</p> <p>Presetting: Invalid value {32767}</p> <p>Transmission: via <i>SCPTmaxSendTime</i> and <i>UCPTtempMode</i></p>	<p>nvoCmFanSpeed</p> <p>Manual fan stage</p> <p>Type: SNVT_switch</p> <p>Range of values: { x, 1} Stage values x = <i>UCPTfan-Config.level_n</i></p> <p>{ 0.0, -1} Automatic {127.5, -1} Invalid value</p> <p>Presetting: Invalid value {0xFF, 0xFF}</p>
<p>nvoCmSetptOffset</p> <p>Manual setpoint offset</p> <p>Type: SNVT_temp_p</p> <p>Range of values: parametrized at <i>UCPTstptRange</i></p> <p>Presetting: Invalid value {32767}</p>	<p>nvoCmSync</p> <p>control for spega SpaceComfortController and synchronization between spega CommandModul objects</p> <p>Type: UNVT_scc_sync</p> <p>Range of values: UNVT_scc_sync</p> <p>Presetting: Invalid value {32767, HVAC_NUL, HVAC_NUL, 32767, 32767, 255, 255, 255, 255, 255, 255, 255, 255}</p>
<p>nvoCmManOcc</p> <p>Manual occupancy</p> <p>Type: SNVT_occupancy</p> <p>Range of values: <i>UCPToccCmds.cmd_on</i> <i>UCPToccCmds.cmd_off</i></p> <p>Presetting: Invalid value {OC_NUL}</p>	

Configuration parameters

Parametrization of the network variables

<p>SCPTmaxSendTime</p> <p>Maximum period of time between sending two telegrams</p> <p>Type: SNVT_time_sec (SCPT #49)</p> <p>Range of values: 0,0 ... 6553,4 Seconds</p> <p>Presetting: 0,0 Seconds {0}</p>	<p>UCPTtempMode</p> <p>use of temperature value, influencing the sending behavior of temperature</p> <p>Type: enumeration (UCPT #91)</p> <p>Range of values: 1 TM_AVERAGE for use on average only cyclic sending 2 TM_INTERNAL as simply value send each change and cyclic if needed 255 TM_NUL sensor not used</p> <p>Presetting: simpel value {2}</p>
--	---

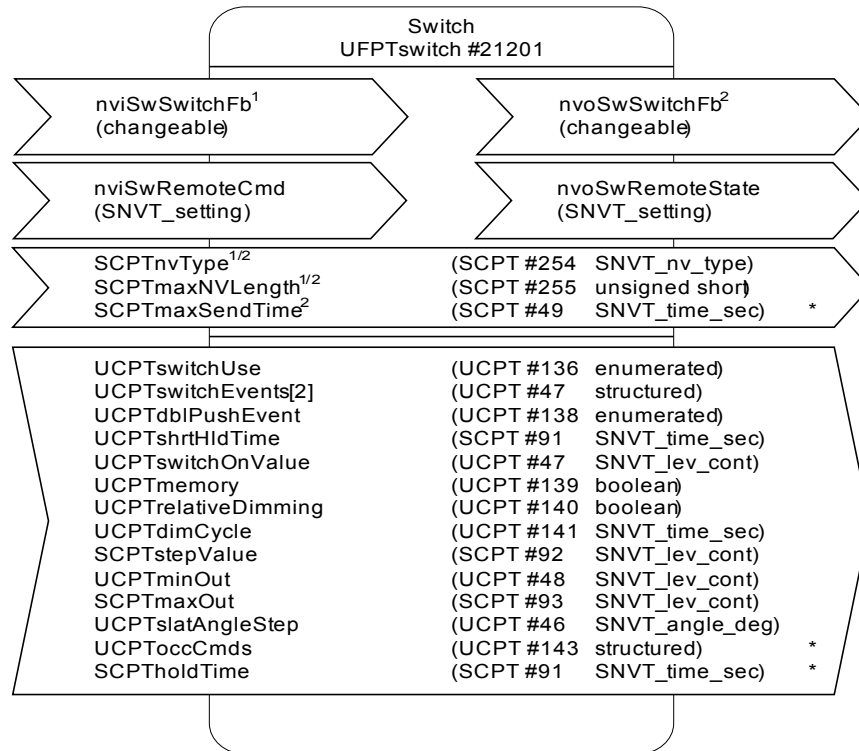

Parametrization of the object

<p>UCPTconfigState</p> <p>only used by Plug-in</p> <p>Type: unsigned (UCPT #117)</p> <p>Range of values: -</p> <p>Presetting: -</p>	<p>SCPToffsetTemp</p> <p>Measurement offset for temperature to calibrate the sensor</p> <p>Type: SNVT_temp_p (SCPT #70)</p> <p>Range of values: -5,00°C - +5,00°C</p> <p>Presetting: 0,00°C</p>
---	---

<p>UCPToccCmdOn Occupancy telegram on occupancy Type: SNVT_occupancy (UCPT #50) Range of values: 0 OC_OCCUPIED Room occupied 2 OC_BYPASS Room temporary occupied Presetting: Room occupied {0}</p>	<p>UCPTfanConfig Selectable fan stages Type: structured (UCPT #146) Range of values: .enable_auto 0 FALSE AUTO not used 1 TRUE AUTO selectable .enable_off 0 FALSE OFF not used 1 TRUE OFF selectable .level_1/.level_2/.level_3 0,0% Stage not used 0,5 - 100,0% Used value for the stage Presetting: AUTO an OFF selectable and 3 stages {TRUE, TRUE, 33.0%, 66.5%, 100,0%}</p>
<p>UCPTstptRange Range and increment for setpoint adjustment Type: structured (UCPT #145) Range of values: .min_range -5,00°C – 0,00°C .max_range 0,00°C - +5,00°C .step 0,5 K – 1,0 K Presetting: range of -3,00 to +3,00°C with increments of 0,5 K {-300, +300, 50}</p>	

1.4.4 Switch

Network interface

Network variables

nviSwSwitchFb Feedback input
 Type: Changeable
 - SNVT_switch
 - SNVT_setting
 Default type: SNVT_setting
 Range of values : Depends on nv type
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

nviSwRemoteCmd Simulation input
 Type: SNVT_setting
 Range of values : SNVT_setting
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

nvoSwSwitch Value output
 Type: Changeable
 - SNVT_switch
 - SNVT_setting
 - SNVT_occupancy*
 Default type: SNVT_setting
 Range of values : Depends on nv type
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

Transmission: Adjustable via
 SCPTmaxSendTime
 * This NV-typ is only selectable on devices with binary inputs

nvoSwRemote State Feedback of actual input state
 Type: SNVT_setting
 Range of values : SNVT_setting
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

Configuration properties

SCPTmax Maximum length of the network variable (read only)
 NVLength

Parametrization of network variables

Type: unsigned short (SCPT #255)
 Presetting: 4 Byte {4}

SCPTnvType Type of network variable
 Type: Structure (SCPT #254)
 Range of values : supported NV-types
 Presetting: SNVT_setting

SCPTmaxSend Maximum time between two telegrams
 Time

Validity: for nvoSwSwitch
 Type: SNVT_time_sec (SCPT #48)
 Range of values : 0 – 6553,4 Seconds
 Presetting: 0 Seconds {0}

* This NV-typ is only selectable on devices with binary inputs

Parametrization of functional object

UCPTswitch Only used by plug-in
 Use
 Type: unsigned short (UCPT #195)

UCPTdblPush Event for parallel pressing of both assigned buttons
 Event
 Type: enumerated
 Range of values : see UCPTswitchEvents
 Presetting: no Event selected {EV_NO_MSG}

UCPTswitch Events on press, hold and release of button(s)
 Events [2]
 Type: array of structured
 Structure: for each button:
 .push short pressing
 .hold long pressing
 .release release after short pressing
 .release_late release after long pressing

UCPTshrtHld Time limit between short and long hold action
 Time
 Type: SNVT_time_sec (UCPT #91)
 Range of values : 0,1 – 30,0 Seconds
 Presetting: 0,5 Seconds

Range of values : for each element/action:
 -1 EV_NULL send invalid
 0 EV_OFF switch off
 1 EV_ON switch on
 2 EV_DIM_DOWN dimm down
 3 EV_DIM_UP dimm up
 4 EV_STOP send stop
 5 EV_SB_DOWN drive sunblind down
 6 EV_SB_UP drive sunblind up
 7 EV_SLAT_DOWN turn slat down
 8 EV_SLAT_UP turn slat up
 9 EV_TOGGLE toggle
 10 EV_DIM dimm toggle
 11 EV_SB_TOGGLE drive toggle
 14 EV_NO_MSG send no message
 Vorbelegung: send no messages

UCPTswitchOn Switch on value
 Value
 Type: SNVT_lev_cont (UCPT #47)
 Range of values : 0,0 – 100,0 %
 Presetting: ON with 100% {100.0}

SCPTstepValue value step for dimming / drive
 Type: SNVT_lev_cont (SCPT #92)
 Range of values : 0,0 – 100,0 %
 Presetting: 10% {20}

UCPTslatAngle angle step for slat turning
 Step
 Type: SNVT_angle_deg (UCPT #46)
 Range of values : -90,00° - +90,00°
 Presetting: 10,00° {500}

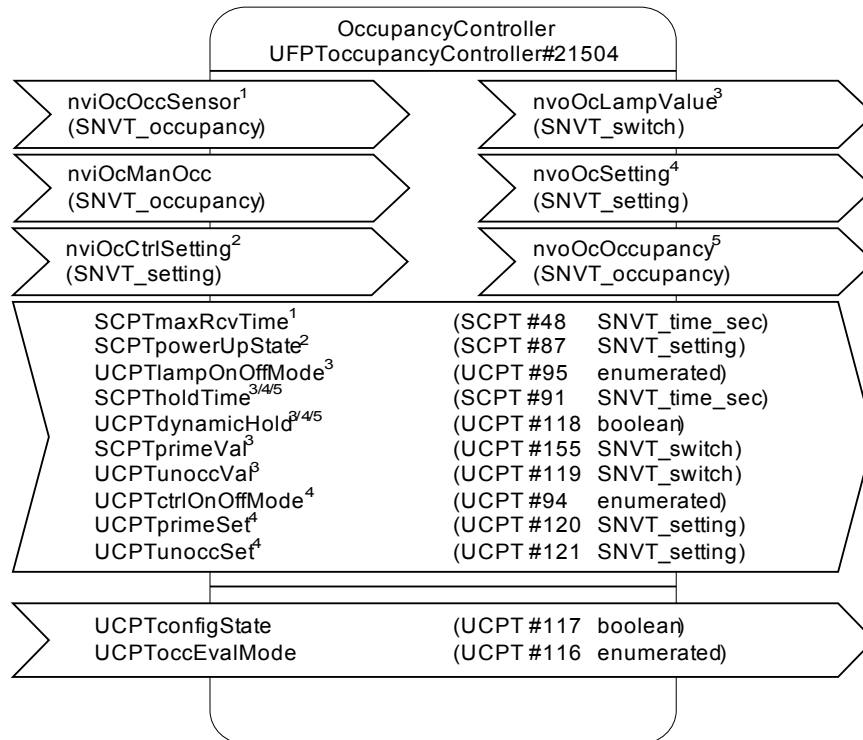

UCPTrelative decides the usage of relative dimming with NV-type SNVT_setting
 Dimming
 Type: boolean

	(UCPT #140)	memory for last switch on value
Range of values :	0 BOOL_FALSE no relative dimming 1 BOOL_TRUE use relative dimming	Type: boolean (UCPT #139)
Presetting:	use relative dimming {BOOL_TRUE}	Range of values : 0 FALSE send UCPTswitchOnValue 1 TRUE send memorised switch on value
UCPTminOut	lower limit for dimming and switching	Presetting: no memory use {0}
Type:	SNVT_lev_cont (UCPT #48)	
Range of values :	0,0 ... 100,0%	UCPToccCmds*
Presetting:	0% {0}	Switch On and switch of values for NV-type SNVT_occupancy
SCPTmaxOut	upper limit for dimming and switching	Type: structured (UCPT #143)
Type:	SNVT_lev_cont (SCPT #93)	Range of values : .cmd_on / .cmd_off SNVT_occupancy
Range of values :	0,0 ... 100,0%	Presetting: 'room occupied' on switch on and 'room unoccupied' on switch of {OC_OCCUPIED, OC_UNOCCUPIED}
Presetting:	100% {200}	<i>* This parameter is only available on devices with binary inputs</i>
UCPTdimmm Cycle	Dimming cycle (Update rate on dimming)	SCPTholdTime*
Type:	SNVT_time_sec	hold time for switch on state of binary input
Range of values :	0,0 No dimming 0,5-6553,4s Cycle time	Type: SNVT_time_sec
Presetting:	0,5 s {5}	Range of values : 0,0 No hold time 0,5-6553,4s Hold time
		Presetting: 0,5 s {5}
UCPTmemory	decides the usage of	<i>* This parameter is only available on devices with binary inputs</i>

<p>UCPTsceneTo Button</p> <p style="padding-left: 40px;">Type: structured {UCPT #16}</p> <p style="padding-left: 40px;">Range of values: For each element: 0 No valid number 1 – 255 Scene number</p> <p style="padding-left: 40px;">Presetting: No valid numbers {0 ... 0}</p>	<p>Allocation of scene numbers to scene buttons</p>	<p>SCPTsceneNmbr</p> <p style="padding-left: 40px;">Type: unsigned {SCPT #94}</p> <p style="padding-left: 40px;">Range of values: 0 No valid number 1 – 255 Scene number</p> <p style="padding-left: 40px;">Presetting: No valid number {0}</p>	<p>Scene number of first scene button on remote control</p>
---	---	---	---

1.4.6 Occupancy control

Network interface

Network variables

<p>nviOcOcc Sensor</p> <p>Occupancy status of the room (sensor input)</p> <p>Type: SNVT_occupancy</p> <p>Range of values: 0 OC_OCCUPIED Room occupied 1 OC_UNOCCUPIED Room unoccupied</p> <p>Presetting: Room unoccupied {1}</p>	<p>nviOcManOcc</p> <p>Occupancy status of the room (manual input)</p> <p>Type: SNVT_occupancy</p> <p>Range of values: -1 OC_NUL Invalid value 0 OC_OCCUPIED Room occupied 1 OC_UNOCCUPIED Room unoccupied 2 OC_BYPASS Room temporary occupied 3 OC_STANDBY Room temporary unoccupied</p> <p>Presetting: Room unoccupied {1}</p>
<p>nviOcCtrl Setting</p> <p>Control input of controller</p> <p>Type: SNVT_setting</p> <p>Range of values: .setting -1 SET_NUL Reset the controller 0 SET_OFF Controller off 1 SET_ON Controller on</p> <p>Presetting: SCPTpowerupState</p>	<p>nvoOcSetting</p> <p>output for controller control</p> <p>Type: SNVT_setting</p> <p>Range of values: SCPTprimeVal If room is occupied UCPTunoccVal If room is unoccupied</p>

<p>nvoOc Occupancy</p> <p>Type: SNVT_occupancy</p> <p>Range of values: 0 OC_OCCUPIED Room occupied 1 OC_UNOCCUPIED Room unoccupied 2 OC_BYPASS Room temporary occupied 3 OC_STANDBY Room temporary unoccupied</p> <p>Presetting: Room unoccupied {1}</p>	<p>nvoOcLamp Value</p> <p>Type: SNVT_switch</p> <p>Range of values: UCPTprimeSet If room is occupied UCPTunoccSet If room is unoccupied</p>
--	---

Configuration parameters

Parametrization of the network variables

<p>SCPTmax RcvTime</p> <p>Duration of validity for 'occupied' telegrams on <i>nviOcOccSensor</i>, serves parallel connection of several sensors</p> <p>Type: SNVT_time_sec (SCPT #48)</p> <p>Range of values: 0 ... 6553,4 Seconds</p> <p>Presetting: 0 Seconds {0}</p>	<p>UCPTdynamic Hold</p> <p>Dynamic increase of the hold time</p> <p>Type: boolean {UCPT #118}</p> <p>Range of values: 0 FALSE No increase 1 TRUE Dynamic increase</p> <p>Presetting: No increase {0}</p>
<p>SCPTpowerup State</p> <p>Controller status after power restoration</p> <p>Type: SNVT_setting</p> <p>Range of values: See <i>nviOcCtrlSetting</i></p> <p>Presetting: Controller active {SET_ON, 100.0%, 0.00°}</p>	<p>SCPTprimeVal</p> <p>Value of switching output if room is occupied</p> <p>Type: SNVT_switch</p> <p>Range of values: SNVT_switch</p> <p>Presetting: Switch on {100.0%, 1}</p>

SCPTmax
RcvTime

Validity duration of telegrams received on the network variables, for *nviScSpaceTemp*, *nviScOccupancy*, *nviScEnergyHdOff* and *nviScDewPoint*: to collect values from more than one source, for *nviScOutdoorTemp* detect missing telegrams

Type: SNVT_time_sec (SCPT #48)

Range of values: 0 ... 6553 seconds

Presetting: 0 seconds {0}

Parametrization of the functional object

SCPTsetPnts

Central setpoints for each energy level and regulation sequence, changeable via *nciSetpoints*

Type: SNVT_temp_setpt (SCPT #60)

Range of values: each element 10,00°C – 40,00°C

Presetting: Comfort cooling stpt 23°C
Standby cooling stpt 25°C
Economy cooling stpt 28°C
Comfort heating stpt 21°C
Standby heating stpt 19°C
Economy heating stpt 16°C
{2300, 2500, 2800, 2100, 1900, 1600}

UCPTconfig
State

only used by Plug-in

Type: unsigned short (UCPT #195)

Range of values: 0 - 255

Presetting: 255 {255}

SCPTminDelta
Level

Minimum of absolute value change causing the value to be re-sent

Type: SNVT_lev_cont (SCPT #88)

Range of values: 0,00% - 20,00 %

Presetting: 0,05% {10}

UCPTprotSetpt
Heat

Heating setpoint for building protection

Type: SNVT_temp_p (UCPT #121)

Range of values: 0,00°C – 50,00°C

Presetting: 12,00°C {1200}

UCPTHvac
Sequences

Selection of sequences to be regulated

Type: enumerated (UCPT #295)

Range of values: -1 NUL
0 HEAT
Heating sequence
1 COOL
Cooling sequence
2 HC_AUTO
Heating & cooling sequence with automatic change over
3 HC_EXT
Heating & cooling sequence with external change over

Presetting: No regulation {-1}

UCPTvalveLock
Time

valve off-time on sequence change

Type: SNVT_time_sec (UCPT #294)

Range of values: 0 No off-time
0,5 – 900,0 Seconds off-time

Presetting: no off-time {0}

UCPTprotSetpt
Cool

Cooling setpoint for building protection

Type: SNVT_temp_p (UCPT #122)

Range of values: 0,00°C – 50,00°C

Presetting: 40,00°C {4000}

UCPTprotSetpt
Frost

Temperature limit for activation of frost alarm

Type: SNVT_temp_p (UCPT #123)

Range of values: 0,00°C – 50,00°C

Presetting: 6,00°C {600}

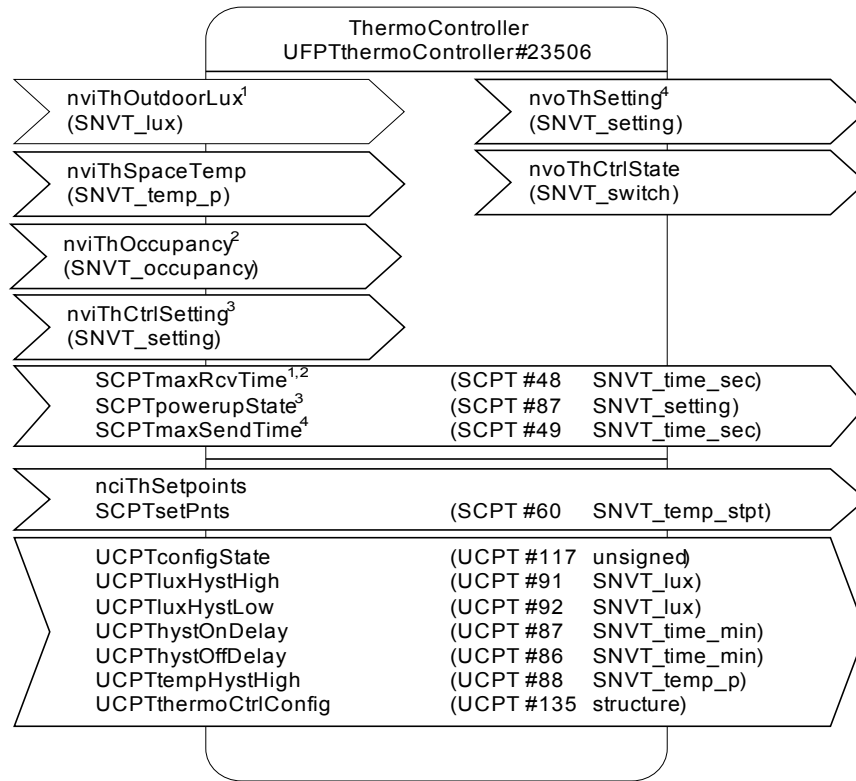

<p>UCPToffsetOn Standby</p> <p>Determine the use of the local setpoint adjustment on standby</p> <p>Type: boolean (UCPT #283)</p> <p>Range of values: 0 FALSE Use for both sequences 1 TRUE Used only for the sequence, where it make sens in energetic aspect</p> <p>Presetting: Use for both sequences {0}</p>	<p>UCPTsummer Comp</p> <p>Parameters of summer compensation</p> <p>Type: structured (UCPT #280)</p> <p>Range of values: <i>.min_temp</i> / <i>.max_temp</i> 20,00°C – 50,00°C <i>.max_offset</i> 0,00 K No summer compensation >0,00 K Maximum setpoint increase</p> <p>Presetting: No summer compensation {2600, 3200, 0}</p>

1.4.9 Thermal control

Network interface

Network variables

nviThOutdoor Lux Outdoor brightness

Type: SNVT_lux
Range of values: 0 – 65535 lux
Presetting: 0 lux

nviThSpaceTemp Room temperature

Type: SNVT_temp_p
Range of values: 0,00°C – 60,00°C
Presetting: 20,00°C {2000}

nviThCtrl Setting Control input for activation and deactivation of the controller

Type: SNVT_setting
Range of values: .state
-1 SET_NUL Automatic
0 SET_OFF Deactivation
1 SET_ON Activation
Presetting: SCPTpowerupState

nviThOccupancy Actual room occupancy

Type: SNVT_occupancy
Range of values: 0 OC_OCCUPIED Room occupied
1 OC_UNOCCUPIED Room unoccupied
2 OC_BYPASS Comfort extension
3 OC_STANDBY Room in standby
Presetting: Room unoccupied {1}

nvoThCtrl State Feedback of controller activity

Type: SNVT_switch
Range of values: { 0, 0} Thermal control inactive
{200, 1} Thermal control active
Presetting: Inactive {0, 0}

nvoThSetting Sunblind operating commands to support heating/cooling
 Type: SNVT_setting
 Range of values: {SET_NUL, 0.0, 0.00}
 No valid command/
 priority reset
 And values from
UCPTthermoCtrlConfig
 Presetting: No valid command
 {SET_NUL, 0.0, 0.00}

Configuration parameters

Parametrization of the network variables

SCPTmaxRcvTime Maximum time for receiving sensor values on *nviThOccupancy*, used to combine telegrams from different sources with an OR-function
 Type: SNVT_time_sec (SCPT #48)
 Range of values: 0 – 6553 Seconds
 Presetting: 0 Seconds {0}

SCPTmaxSendTime Maximum period of time between sending two telegrams on *nvoThSetting*
 Type: SNVT_time_sec (SCPT #49)
 Range of values: 0 No periodic re-sent
 1 - 6553 Seconds
 Presetting: No periodic re-sent {0}

SCPTpowerUpState Status of the controller after power restoration
 Type: SNVT_setting
 Range of values: See *nviThCtrlSetting*
 Presetting: Automatic
 {SET_NUL, 0.0, 0.00}

Parametrization of the object

UCPTconfigState Only used by Plug-in
 Type: unsigned short (UCPT #195)
 Range of values: 0 - 255
 Presetting: 255 {255}

UCPTluxHystHigh Activation treshold value of light intensity
 Type: SNVT_lux
 Range of values: 0 - 65535 lux
 Presetting: 20000 lux {20000}

SCPTsetPnts Setpoints for heat/cool support, can be changed via *nciThSetpoints*
 Type: SNVT_temp_setpt
 Range of values: Only .occupied_x relevant, each element:
 0,00°C – 50,00°C
 Presetting: Comfort cool setpoint 23°C
 Comfort heat setpoint 21°C
 {2300, 0, 0, 2100, 0, 0}

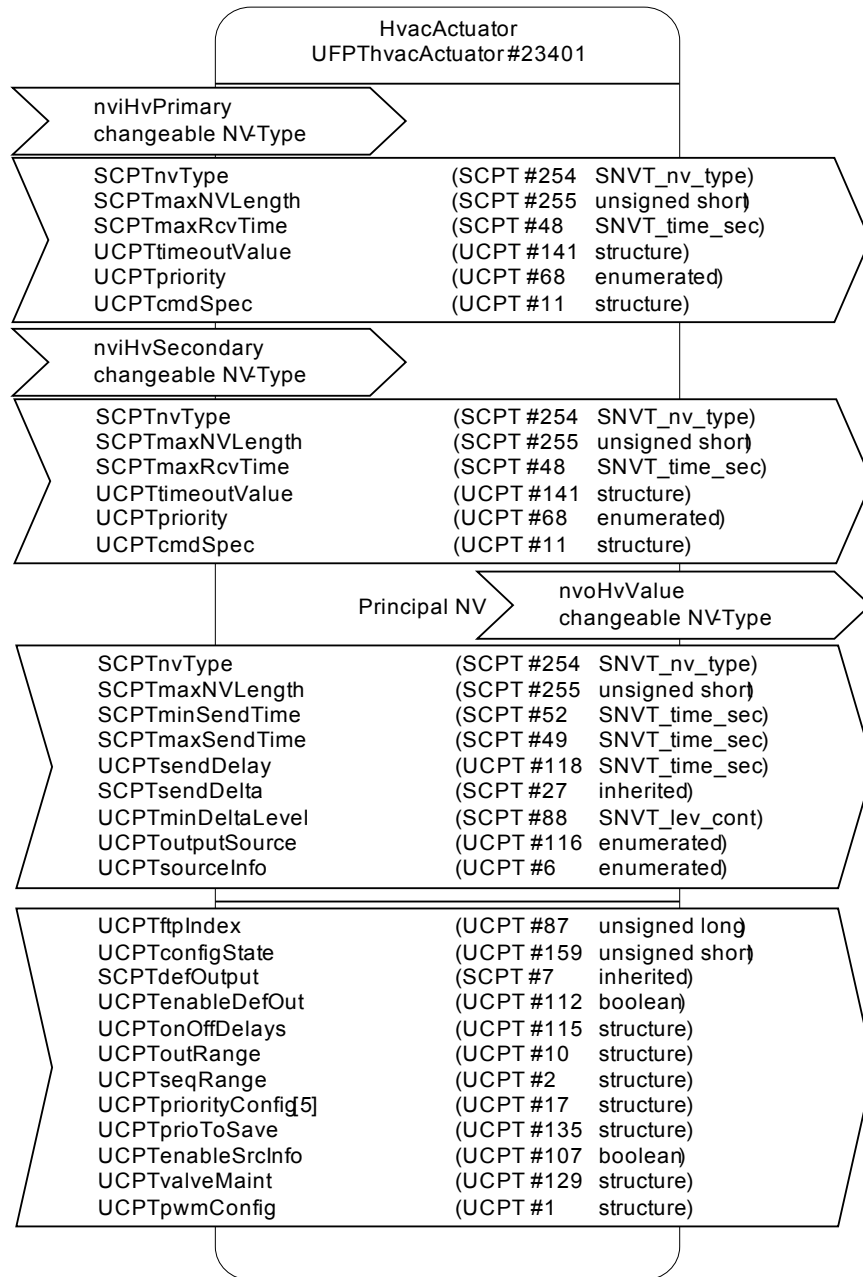

UCPTluxHystLow Deactivation treshold value of light intensity
 Type: SNVT_lux
 Range of values: 0 - 65535 lux
 Presetting: 5000 lux {5000}

UCPThystOnDelay Delay on activation
 Type: SNVT_time_min
 Range of values: 0 - 360 Minutes
 Presetting: 10 Minutes {10}

<p>UCPT_{hystOff} Delay</p> <p style="padding-left: 40px;">Type: SNVT_time_min</p> <p style="padding-left: 40px;">Range of values: 0 - 360 Minutes</p> <p style="padding-left: 40px;">Presetting: 20 Minutes {20}</p>	<p>Delay on deactivation</p>	<p>UCPT_{thermo} CtrlConfig</p> <p style="padding-left: 40px;">Type: structured</p> <p style="padding-left: 40px;">Range of values: Each element: SNVT_setting</p> <p style="padding-left: 40px;">Presetting: Top end position for heat support, bottom end position with closed slat for cool support and priority reset on deactivation {SET_STATE,0,0}, {SET_STATE,200,-2250}, {SET_NUL,0,0}</p>	<p>Sunblind operating commands</p>
<p>UCPT_{tempHyst} High</p> <p style="padding-left: 40px;">Type: SNVT_temp_p</p> <p style="padding-left: 40px;">Range of values: 0,5 K - 5,00 K</p> <p style="padding-left: 40px;">Presetting: 1 K {100}</p>	<p>Temperature hysteresis</p>		

1.4.10 HVAC actuator

Network interface

Network variables

<p>nviHvPrimary Primary value input Type: Changeable Type presetting: SNVT_lev_percent Range of values: Depends on nv-type Presetting: 0/OFF {0.00} Heartbeat control: Adjustable via <i>SCPTmaxRcvTime</i></p>	<p>nvoHvValue Feedback output of the actuator, Principal NV (the selected type will be used for some configuration parameters) Type: Changeable Type presetting: SNVT_lev_percent Range of values: Depends on nv-type Presetting: Depends on nv-type Transmission: Adjustable via <i>SCPTminSendTime</i>, <i>SCPTmaxSendTime</i>, <i>SCPTminDeltaLvl</i>, <i>SCPTsndDelta</i></p>
<p>nviHvSecondary Secondary value input Type: Changeable Type presetting: SNVT_lev_percent Range of values: Depends on nv-type Presetting: 0/OFF {0.00} Heartbeat control: Adjustable via <i>SCPTmaxRcvTime</i></p>	

Configuration properties

Parametrization of network variables

<p>SCPTnvType Type definition of the network variable Type: Structure (SCPT #254) Range of values: Supported nv types Presetting: SNVT_lev_percent {0,0,0,0,0,0,0,0,0,81, NVT_SIGNED_LONG,2, 5L,-3L,0L}</p>	<p>SCPTmaxNVLength Maximum length of the network variable (read only) Type: unsigned short (SCPT #255) Presetting: 2 Byte {2}</p>
---	---

Parametrization of input variables

<p>SCPTmaxRcvTime Maximum receive time for messages Type: SNVT_time_sec (SCPT #48) Range of values: 0,0 ... 6553,5 Seconds Presetting: 0 Seconds {0}</p>	<p>UCPTpriority Priority / function of value input NVs Type: enumerated (UCPT #68) Range of values: -1 NUL Invalid value 0 AUTO Automatic 1 MAN Manual control 2 OVR1 Override 1 3 WEATHER Weather protection 5 OVRD2 Override 2 6 SAFETY Safety Presetting: Depends on object type</p>
<p>UCPTtimeoutValue Command for transmission failure Type: Length of 4 Byte, formatted as actual NV-type of <i>nviHvValue</i> (UCPT #141) Range of values: Depends on nv-type Presetting: Depends on nv-type</p>	

UCPTcmdSpec type of control on value
input NVs

 Type: structure
 (UCPT #11)

 Structure: typedef struct{
 unsigned cmd_use :4
 unsigned cmd_index :4
 }

 Range of values: .cmd_use
 0 DIRECT Direct value
 1 LOCK Lock
 command
 2 RELEASE Release
 kommando

 .cmd_index
 entry index of device
 parameter
 UCPTcmdTable, where
 the command for locking is
 defined (only for CMDU_
 LOCK, CMDU_RELEASE)

 Presetting: {0 0}

Parametrization of output variables

SCPTmin Minimum time between two
SendTime telegrams

 Type: SNVT_time_sec
 (SCPT #52)

 Range of values: 0,0 ... 6553,5 Seconds
 Presetting: 0,1 Seconds {1}

SCPTmax Maximum time between
SendTime two telegrams

 Type: SNVT_time_sec
 (SCPT #49)

 Range of values: 0,0 ... 6553,5 Seconds
 Presetting: 0,0 Seconds {0}

UCPTsendDelay Sending delay

 Type: SNVT_time_sec
 (UCPT #118)

 Range of values: 0,0 ... 6553,5 Seconds
 Presetting: 0,0 Seconds {0}

SCPTminDelta Relative minimum change
Lvl on value

 Type: SNVT_lev_percent
 (SCPT #88)

 Range of values: 0,0% ... 100,0%
 Presetting: 0,0% {0}

UCPToutput Data source for values on
Source nvoHvValue

 Type: enumerated
 (UCPT #116)

 Range of values: -1 NUL
 no output
 0 FB_STATE
 value from hardware
 1 NET_Prio
 NV telegram after
 processed by priority
 control
 2 OUT_STATE
 control value after
 processed by object
 3 NET_CMD
 all nv telegrams

 Presetting: Depends on object type

SCPTsndDelta Absolute minimum change
 on value

 Type: inherited
 (SCPT #27)

 Range of values: Depends on nv-type
 Presetting: Depends on nv-type

UCPTsourceInfo for future use

 Type: enumerated
 (UCPT #6)

 Presetting: invalid (-1)

Parametrization of functional object

<p>UCPTftpIndex</p> <p>Index of the used functional profile (constant)</p> <p>Type: unsigned long (UCPT #87)</p> <p>Value: 23400 HvacActuator</p>	<p>UCPTseqRange</p> <p>Valid input value range (sequence control)</p> <p>Type: structure (UCPT #2)</p> <p>Structure: typedef struct{ SNVT_lev_percent min_range; SNVT_lev_percent max_range; unsigned use_on_auto :1; unsigned use_on_man :1; unsigned use_on_ovrd1 :1; unsigned use_on_weather :1; unsigned use_on_ovrd2 :1; unsigned use_on_safety :1; } }</p>
<p>UCPTconfig State</p> <p>Only used by Plug-in</p> <p>Type: unsigned short (UCPT #195)</p>	<p>UCPTpriority Config</p> <p>Priority configuration (do this via object plug-in)</p> <p>Type: structure (UCPT #17)</p> <p>Structure: typedef struct{ unsigned return_cmd :4; unsigned get_back_cmd :4; unsigned return_behave :2; unsigned g_b_f_man :1; unsigned g_b_f_ovrd1 :1; unsigned g_b_f_weather :1; unsigned g_b_f_ovrd2 :1; unsigned g_b_f_safety :1; } }</p>
<p>SCPTdefOutput</p> <p>Control value / movement command on voltage recovery (Execution depends on active priority and the setting of <i>UCPTenableDefOutput</i>)</p> <p>Type: inherited (SCPT #7)</p> <p>Range of values: Depends on nv-type</p> <p>Presetting: Depends on nv-type</p>	<p>Range of values: <i>.min_range / .max_range</i> -100,00% ... 100,00% <i>.use_on_*</i> 0 No sequence control 1 Use min_range and max_range</p> <p>Presetting: No sequence control {0 20000 0 0 0 0 0}</p>
<p>UCPTenable DefOutput</p> <p>Determines if <i>SCPTdefOutput</i> is valid</p> <p>Type: boolean (UCPT #112)</p> <p>Range of values: FALSE <i>SCPTdefOutput</i> is invalid TRUE <i>SCPTdefOutput</i> is valid</p> <p>Presetting: invalid {FALSE}</p>	<p>UCPTonOff Delays</p> <p>Delay settings</p> <p>Type: structure (UCPT #115)</p> <p>Structure: typedef struct{ SNVT_time_sec on_delay; SNVT_time_sec off_delay; unsigned use_on_auto :1; unsigned use_on_man :1; unsigned use_on_ovrd1 :1; unsigned use_on_weather :1; unsigned use_on_ovrd2 :1; unsigned use_on_safety :1; } }</p>
<p>Range of values: <i>.on_delay / .off_delay</i> 0,0 ... 6553,5 Seconds</p> <p><i>.use_on_*</i> 0 no delays 1 delays used for this priority</p> <p>Presetting: no delays for all priorities {0 0 0 0 0 0 0}</p>	<p>Range of values: <i>.*_cmd</i> 0 ... 15 command index of device parameter <i>UCPTcmdTable</i> <i>.return_behave</i> 0 REBH_NUL do nothing 1 REBH_LAST_CMD recall last absolute positioning value 2 REBH_SPECIFIC_CMD use specific control value / movement command <i>.get_back_from_*</i> 0 recall from this priority permitted 1 recall from this priority allowed</p> <p>Presetting: {0 0 0 0 0 0 0}</p>

<p>UCPTenable SourceInfo</p> <p>Type: boolean (UCPT #107)</p> <p>Presetting: not used (0)</p>	<p>for future use</p>	<p>UCPToutRange</p> <p>Limit of the output range</p> <p>Type: structure (UCPT #10)</p> <p>Structure: typedef struct{ SNVT_lev_percent min_output; SNVT_lev_percent max_output; }</p> <p>Range of values: <i>.min_output</i> / <i>.max_output</i> -100,00% ... 100,00 %</p> <p>Presetting: 0,00% - 100% {0 20000}</p>
<p>UCPTprioTo Save</p> <p>Type: structure (UCPT #135)</p> <p>Structure: typedef struct{ unsigned save_auto :1; unsigned save_man :1; unsigned save_ovrd1 :1; unsigned save_weather :1; unsigned save_ovrd2 :1; unsigned save_safety :1; }</p> <p>Range of values: 0 do not save 1 save non-volatile</p> <p>Presetting: Do not save {0 0 0 0 0 }</p>	<p>Saving priorities</p>	<p>UCPTvalve Maint</p> <p>Configuration of valve rinsing</p> <p>Type: structure (UCPT #129)</p> <p>Structure: typedef struct{ unsigned maint_period; unsigned accept_on_values:1; unsigned end_on_off:1; }</p> <p>Range of values:<i>.maint_period</i> 0 No valve rinsing 1...63 Prior days of inactivity <i>.accept_on_values</i> TRUE Accept on values under 100% FALSE Ignore on values under 100% <i>.end_on_off</i> TRUE Valve rinsing ends on off values FALSE Off values can't stop valve rinsing</p> <p>Presetting:Valve rinsing after 7 prior days of inactivity, accepting on values under 100 % and ignoring off values</p>
<p>UCPTpwm Config</p> <p>Type: structure (UCPT #1)</p> <p>Structure: typedef struct{ SNVT_time_sec cycle_time; SNVT_lev_cont max_on; }</p> <p>Range of values:<i>.cycle_time</i> 0 no PWM 1,0 ...6553,5 s PWM-Cycle <i>.max_on</i> 0,5 ... 100,0% max. valve position</p> <p>Presetting: no PWM { 0, 200}</p>	<p>Parameter for pulse width modulation</p>
