1. Applications

Using one of the multisensor applications you can capture and control different HVAC and lighting systems. The following applications/multisensors are available:

Multisensor	Application												
		NodeObject	LightSensor	Occupancy Sensor	Universal Sensor	Command Module	Switch	ScenePanel	Occupancy Controller	DewPoint Calculator	Space Comfort Controller	ThermoController	ConstantLight Controller
lumina MS4	SC911113EC_01	1	1	1	-	1	8	1	1	1	1	1	1
lumina MS4-RC	SC911313EC_01	1	1	1	3	1	8	1	1	1	1	1	1

1.1. Application data

You can select the desired application in the spega device template manager. All the required application files, resource files and plug-ins for the relevant project will be loaded.

Application	SC911113EC_01
Multisensor	lumina MS4
Application files	SC911113EC_01.APB SC911113EC_01.NXE SC911113EC_01.XIF SC911113EC_01.XFB
Ressource files	spega_ec Ressource files required, from version 1.14 onwards sistema_mc16 Ressource files required, from version 1.02 onwards
Plug-ins	Multisensor device plug-in, object plug-ins

Application	SC911313EC_01
Multisensor	lumina MS4-RC
Application files	SC911313EC_01.APB SC911313EC_01.NXE SC911313EC_01.XIF SC911313EC_01.XFB
Ressource files	spega_ec Ressource files required, from version 1.14 onwards sistema_mc16 Ressource files required, from version 1.02 onwards
Plug-ins	Multisensor device plug-in, object plug-ins

The software complies with LonMark™ Interoperability Guidelines. When using LNS-based integration tools we recommend the use of the resource files listed.

1.2. Automation functions

You can achieve a wide range of various automation functions with the spega multisensors. Their availability depends on which multisensor is used and how the objects are configured.

1.2.1 VDI3813 – Functions

Sensor functions

- Presence detection
- Brightness measurement
- Air temperature measurement
- Window monitoring (radio)
- Air quality measurement (radio)

Operating and display functions

- Actuate light
- Actuate sunshade
- Actuate drive
- Signal presence
- Adjust temperature setpoint
- Select room utilization type

Application functions

- Occupancy evaluation
- Control via room utilization types
- Automatic lights
- Daylight-dependent lighting
- Constant light control
- Automatic thermal control
- Energy mode selection
- Energy mode selection with start optimization
- Setpoint calculation
- Function selection
- Temperature control (heating/cooling)
- Air quality control
- Fan control
- Night time cooling

1.2.2 Extended functions

Sensor functions

- Measurement of relative Humidity (radio)

Application functions

- Dew point calculation

Object behaviour

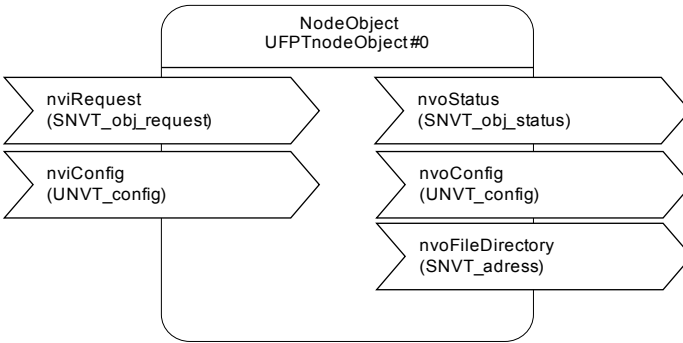

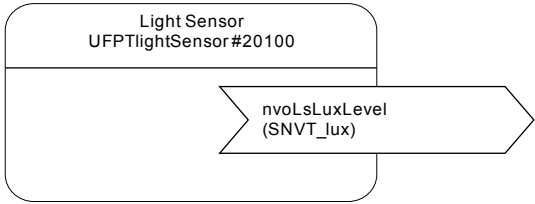

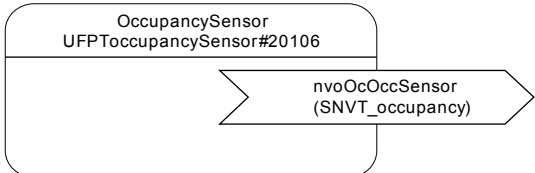

- Action in the event of communication faults
- Action following resumption of power supply or reset
- Switchable network variable types
- Transmission response for output network variables

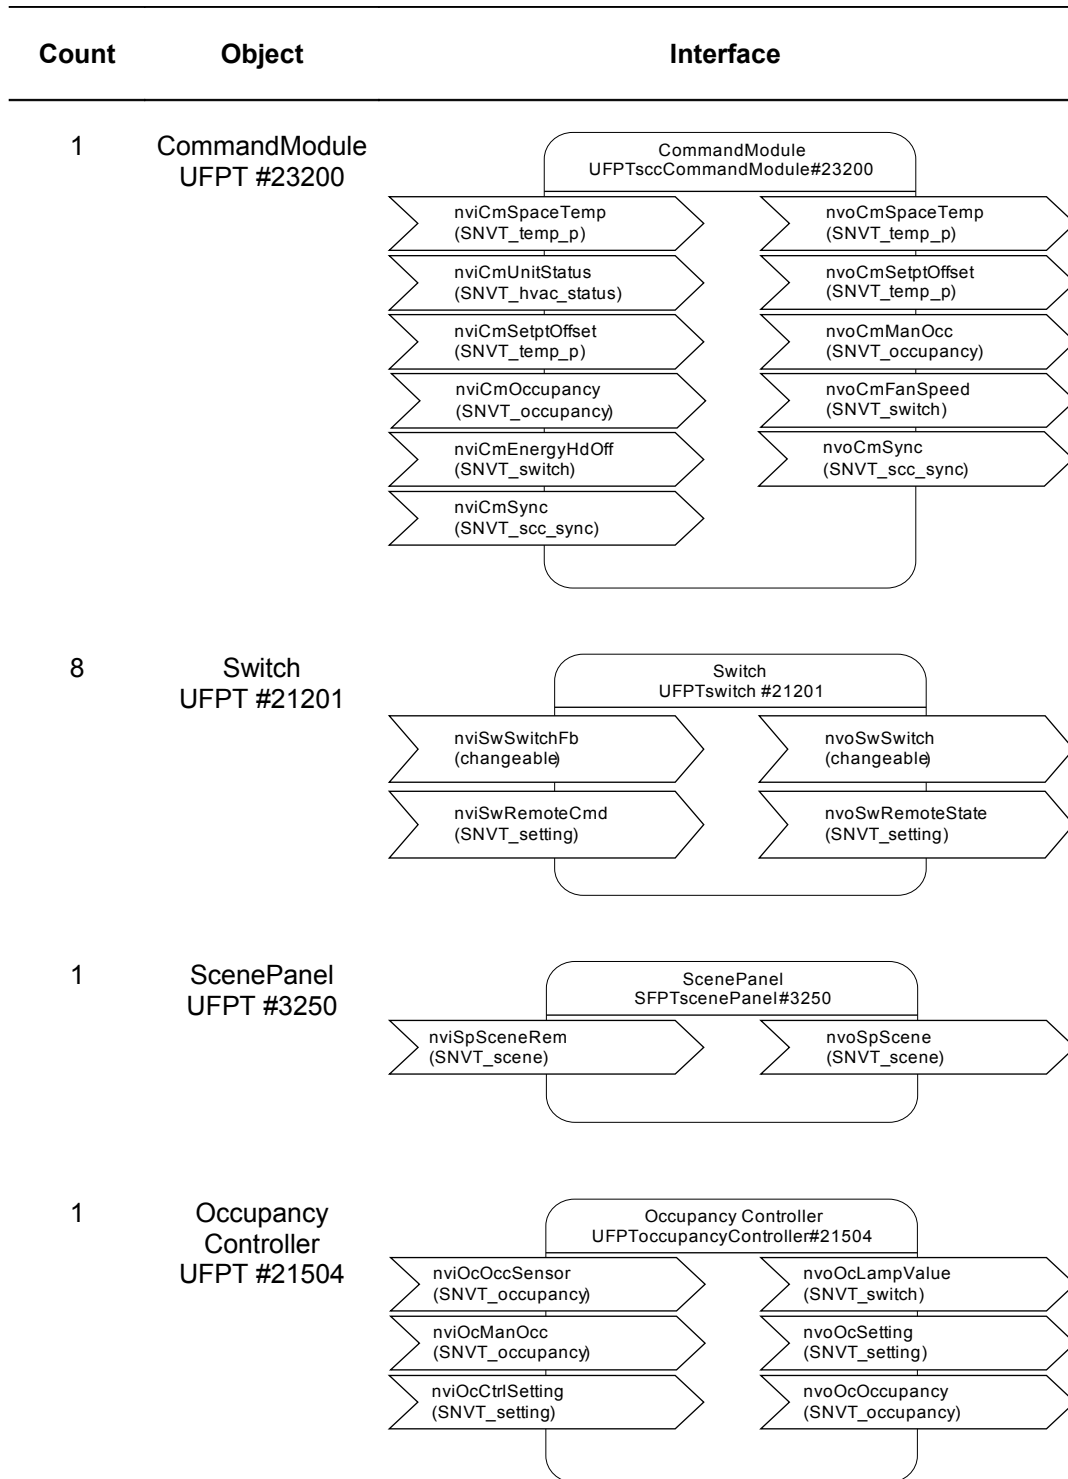

1.3. Device templates - Interfaces

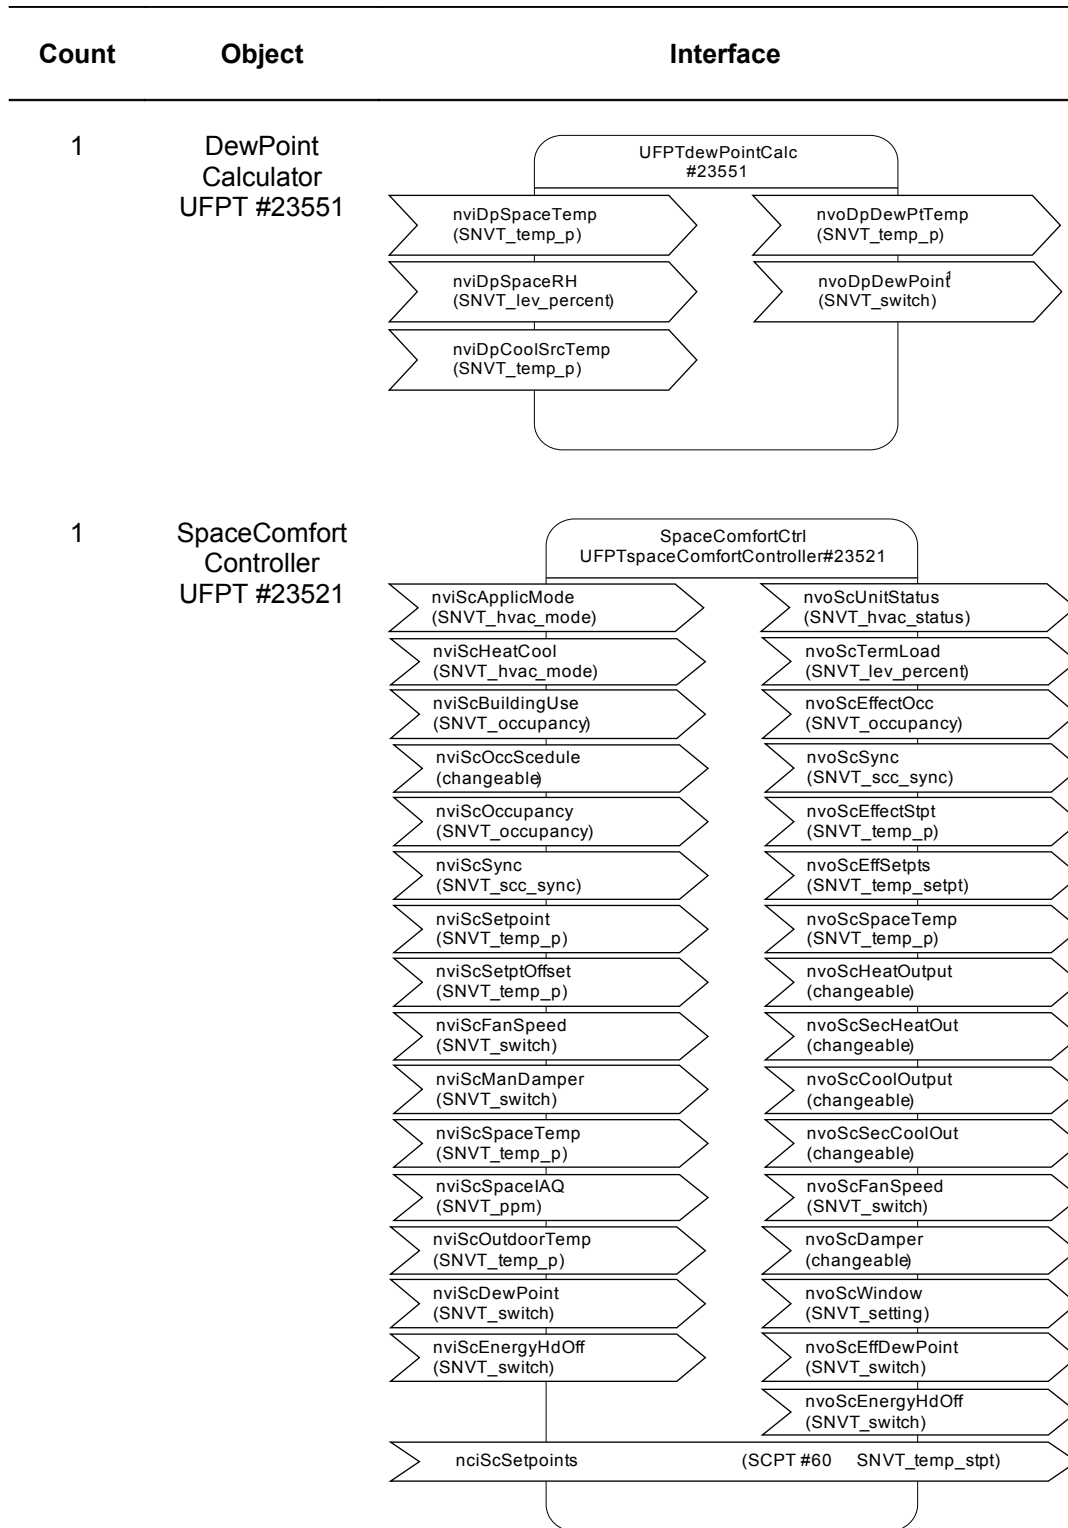

This section contains a brief description of the device templates of the applications available for the device.

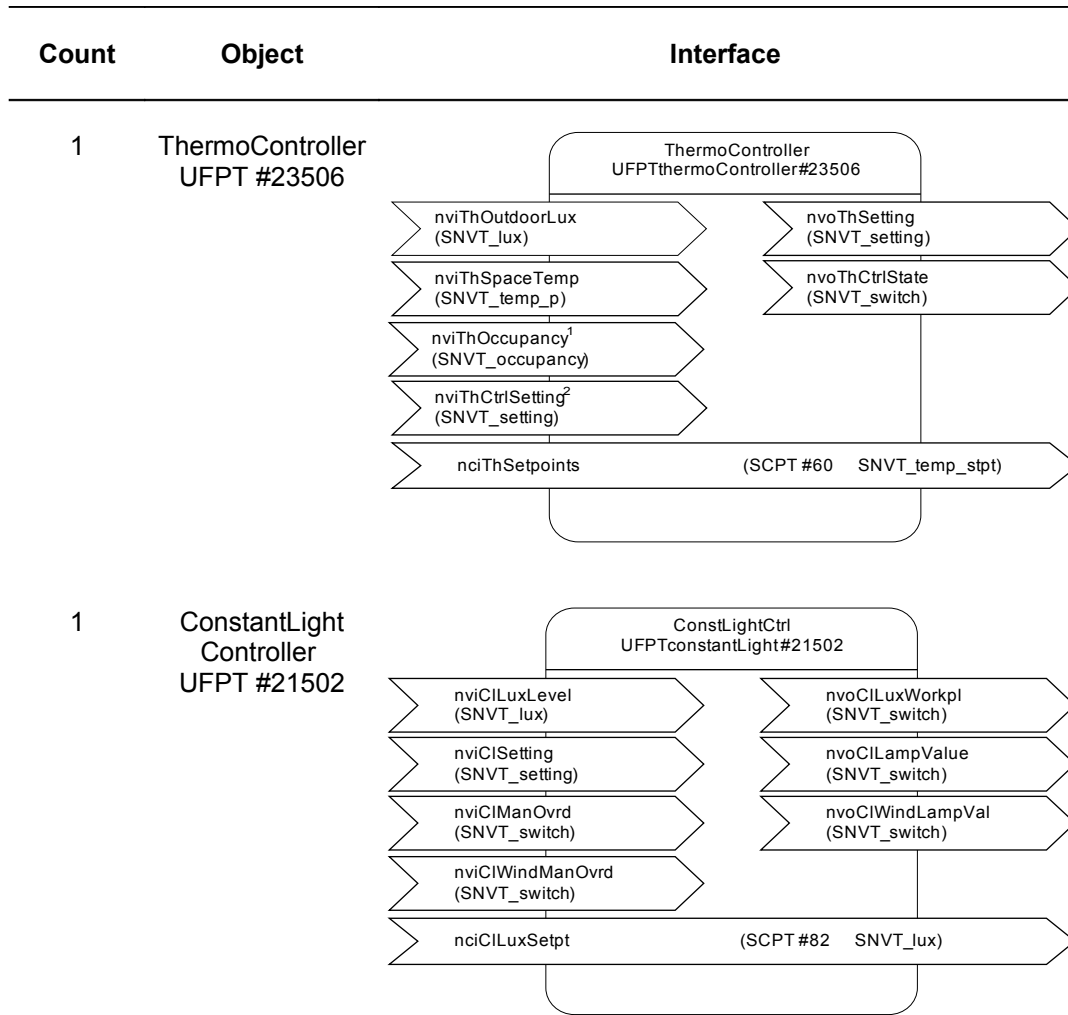

1.3.1 Applications

SC911113EC_01

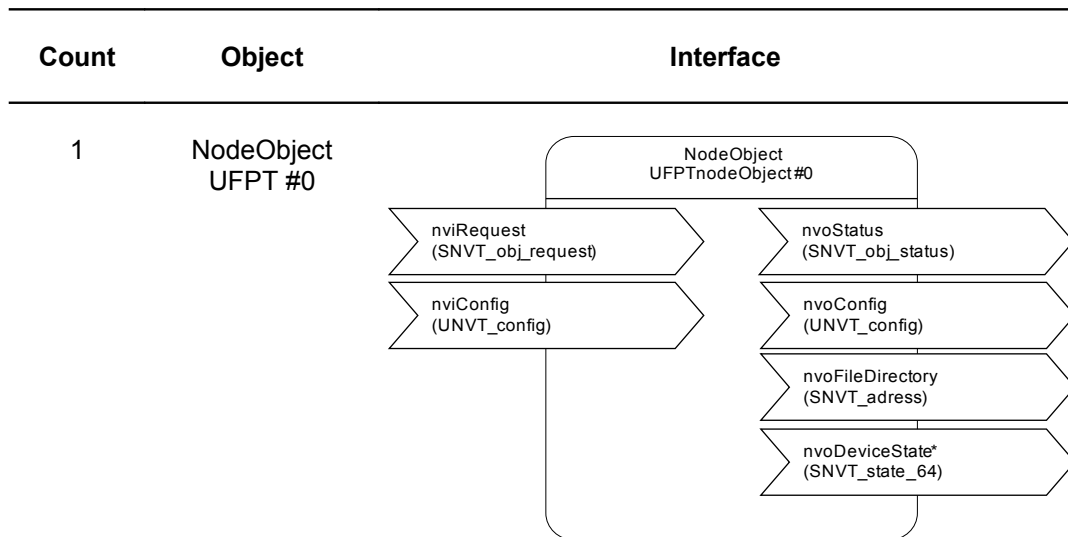

Count	Object	Interface
1	NodeObject UFPT #0	 <p>NodeObject UFPTnodeObject#0</p> <p>nviRequest (SNVT_obj_request)</p> <p>nviConfig (UNVT_config)</p> <p>nvoStatus (SNVT_obj_status)</p> <p>nvoConfig (UNVT_config)</p> <p>nvoFileDirectory (SNVT_adress)</p>
1	LightSensor UFPT #20100	 <p>Light Sensor UFPTlightSensor#20100</p> <p>nvoLsLuxLevel (SNVT_lux)</p>
1	OccupancySensor UFPT #20106	 <p>OccupancySensor UFPToccupancySensor#20106</p> <p>nvoOcOccSensor (SNVT_occupancy)</p>

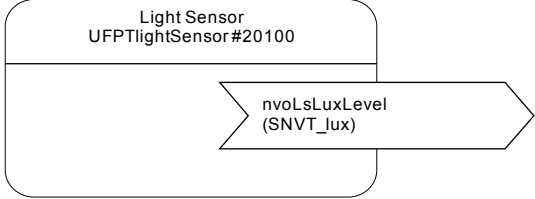

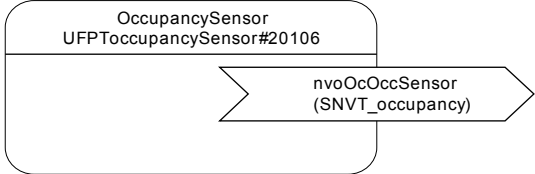

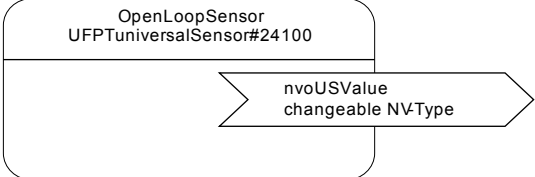

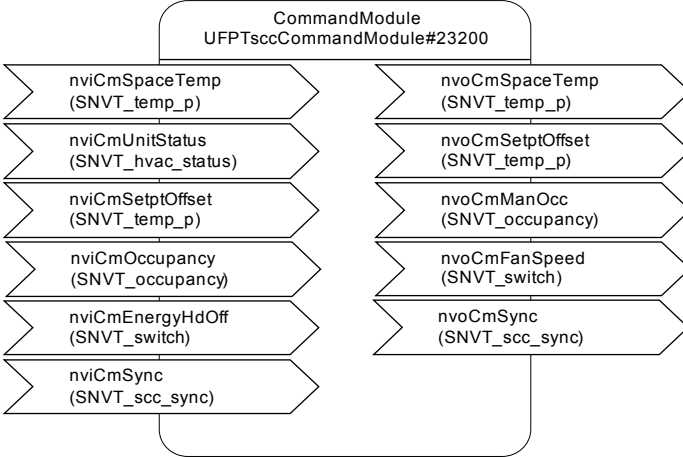

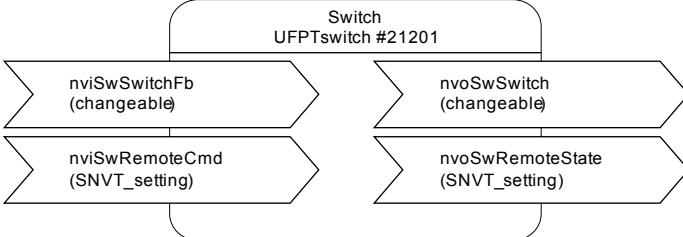

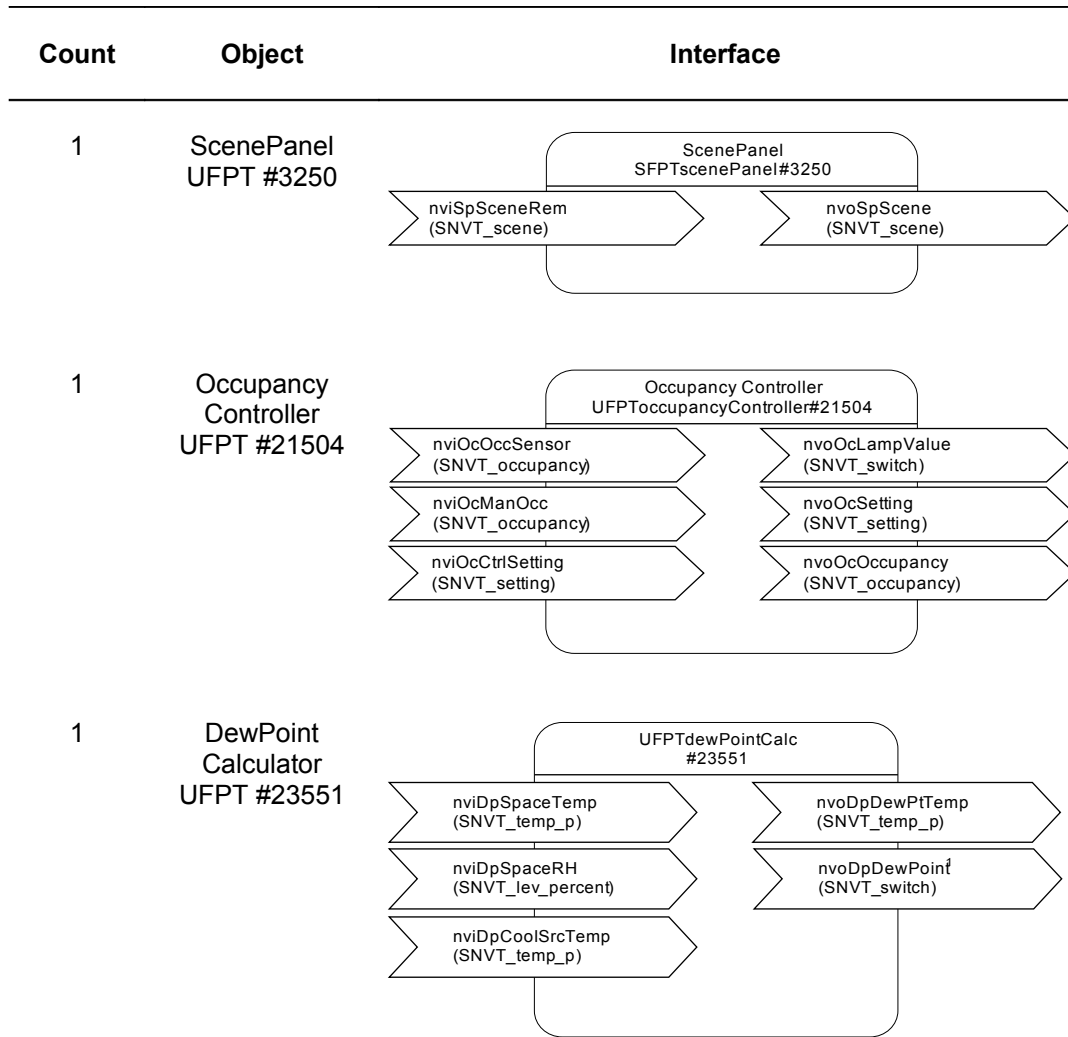

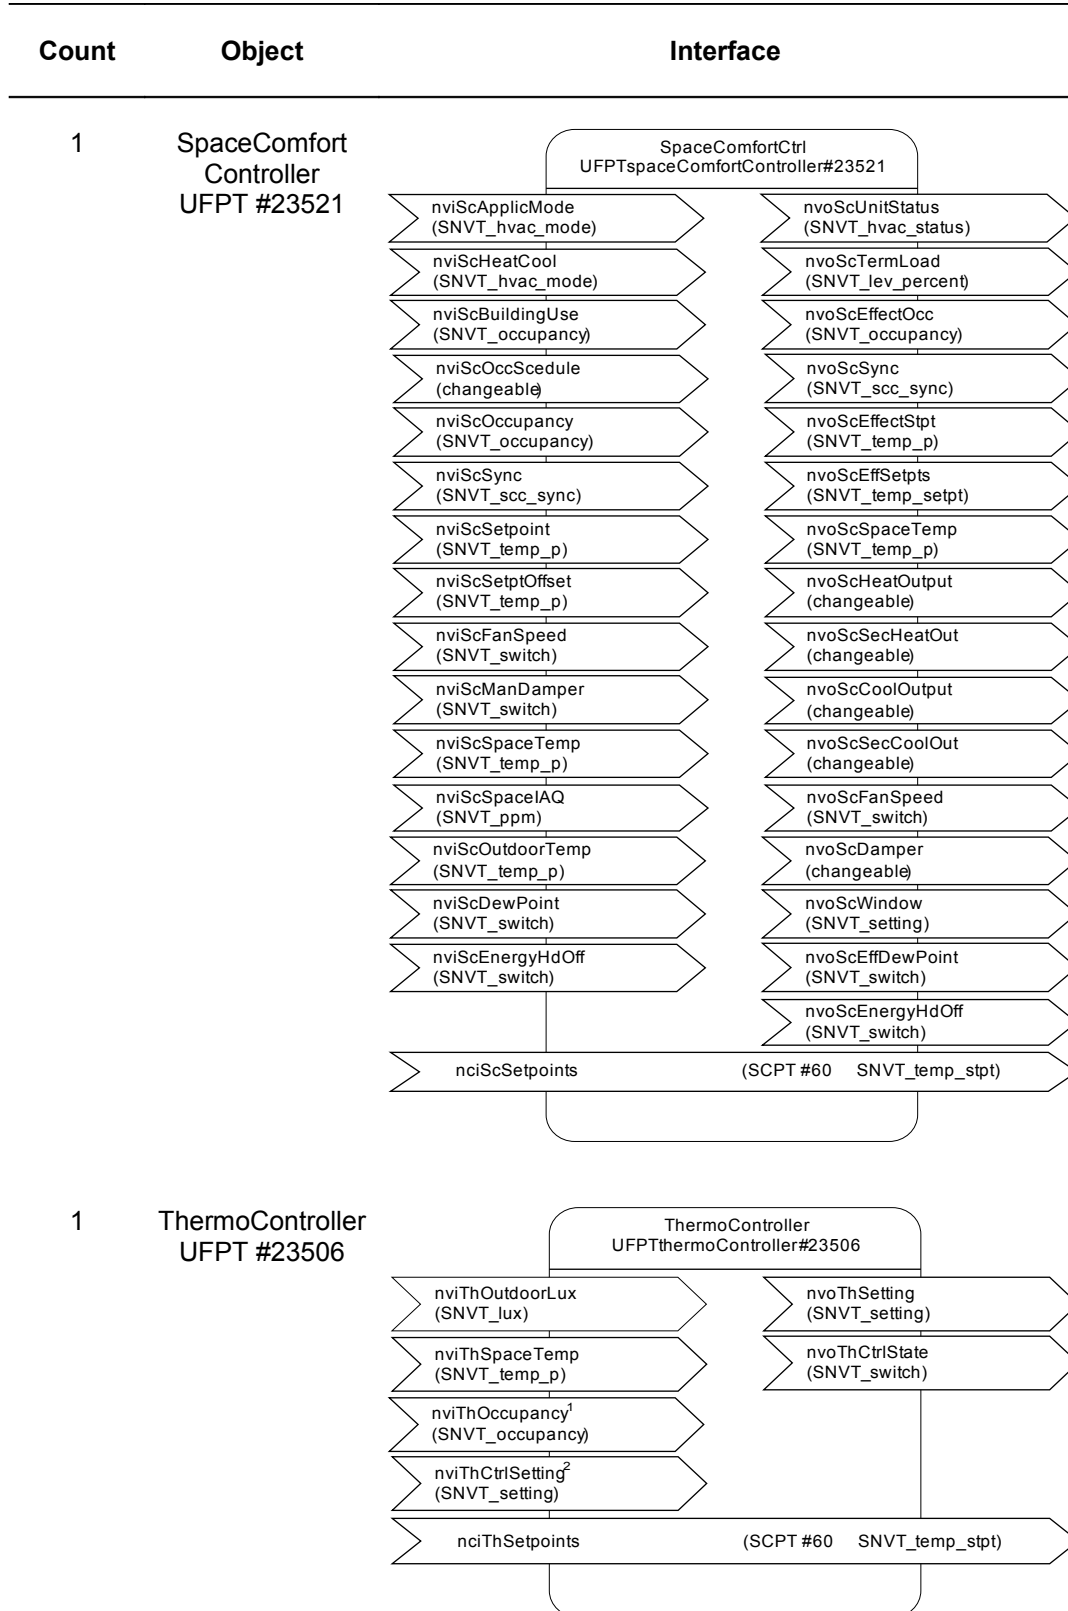

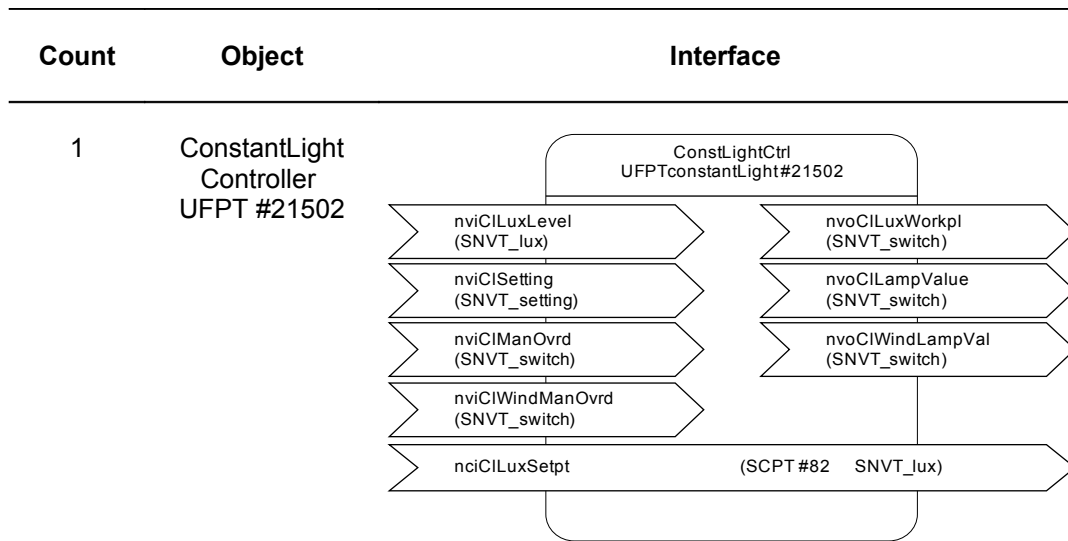

SC911313EC_01

Count	Object	Interface
1	LightSensor UFPT #20100	 <p>Light Sensor UFPTlightSensor#20100</p> <p>nvoLsLuxLevel (SNVT_lux)</p>
1	OccupancySensor UFPT #20106	 <p>OccupancySensor UFPToccupancySensor#20106</p> <p>nvoOcOccSensor (SNVT_occupancy)</p>
3	OpenLoopSensor UFPT #24100	 <p>OpenLoopSensor UFPTuniversalSensor#24100</p> <p>nvoUSValue changeable NV-Type</p>
1	CommandModule UFPT #23200	 <p>CommandModule UFPTsccCommandModule#23200</p> <p>nviCmSpaceTemp (SNVT_temp_p)</p> <p>nviCmUnitStatus (SNVT_hvac_status)</p> <p>nviCmSetptOffset (SNVT_temp_p)</p> <p>nviCmOccupancy (SNVT_occupancy)</p> <p>nviCmEnergyHdOff (SNVT_switch)</p> <p>nviCmSync (SNVT_scc_sync)</p> <p>nvoCmSpaceTemp (SNVT_temp_p)</p> <p>nvoCmSetptOffset (SNVT_temp_p)</p> <p>nvoCmManOcc (SNVT_occupancy)</p> <p>nvoCmFanSpeed (SNVT_switch)</p> <p>nvoCmSync (SNVT_scc_sync)</p>
8	Switch UFPT #21201	 <p>Switch UFPTswitch #21201</p> <p>nviSwSwitchFb (changeable)</p> <p>nviSwRemoteCmd (SNVT_setting)</p> <p>nvoSwSwitch (changeable)</p> <p>nvoSwRemoteState (SNVT_setting)</p>

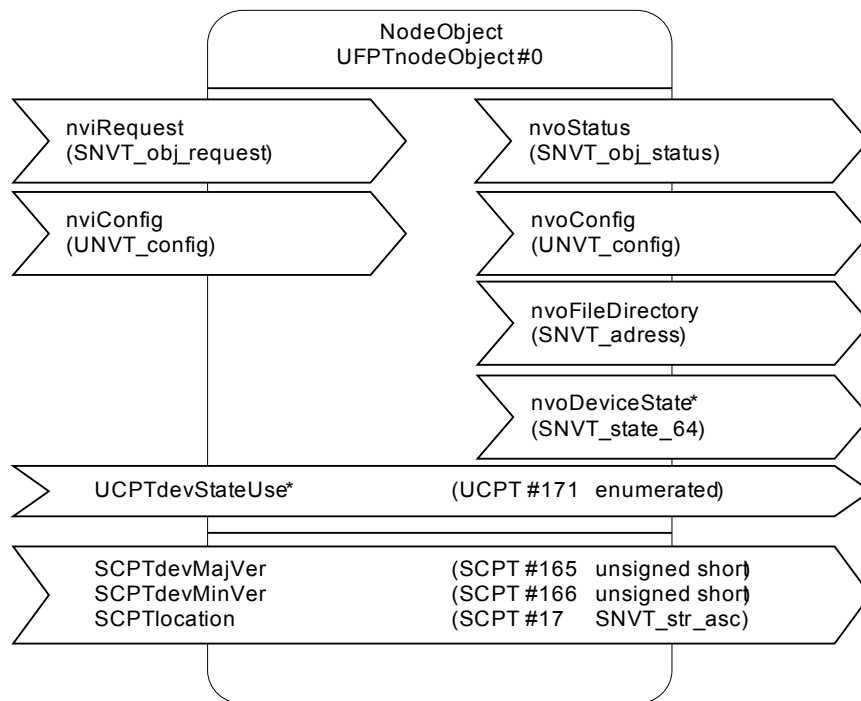

1.4. Description of software objects

The individual functional objects are described in greater detail below.

1.4.1 Node object

Network interface

* only with radio receiver

Network variables

Input variables

nviRequest Default network input for receiving management commands
 Type: SNVT_obj_request
 Presetting: {0, RQ_NORMAL}

nviConfig Communication interface for plug-ins
 Type: UNVT_config

Output variables

nvoConfig Communication interface for plug-ins
 Type: UNVT_config
 Transmission: on request via *nviConfig*

nvoDevice State Output of status messages
 Type: enumerated

nvoFile Directory Provides the start address of the config file directory of the device
 Type: SNVT_address
 Transmission: During file transfer or polling

nvoStatus Output of status data for received request management commands via *nviRequest*
 Type: SNVT_obj_status
 Transmission: On request via *nviRequest*

Configuration properties

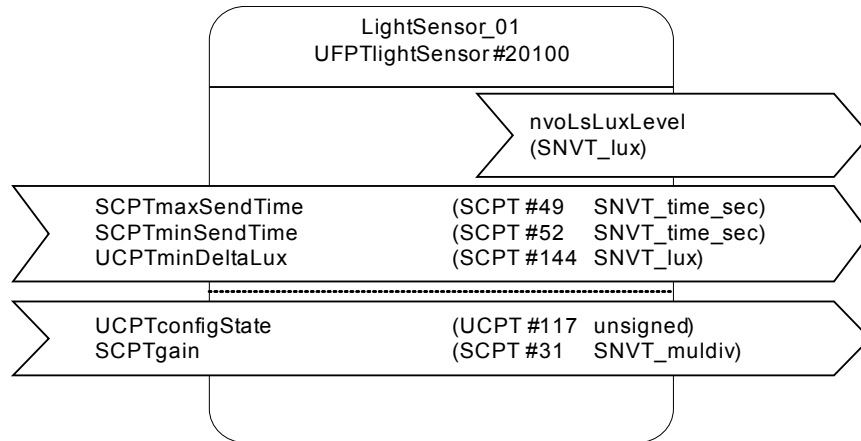

SCPTdevMaj Ver Major version of the application
 Type: SCPT #165 (read only) unsigned short
 Value: Application specific

SCPTlocation Extended description of the device location
 Type: SCPT #17 SNVT_str_asc
 Presetting: { 0 0 0 0 0 0 0 0
 0 0 0 0 0 0 0 0
 0 0 0 0 0 0 0 0
 0 0 0 0 0 0 0 0 }

SCPTdevMin Ver Minor version of the application
 Type: SCPT #166 (read only) unsigned short
 Value: Application specific

1.4.2 Brightness measurement

Network interface

Network variables

nvoLsLuxLevel Measurement value
 Type: SNVT_lux
 Range of values: 0 – 65335 lux
 Presetting: 0 lux {0}
 Transmission: adjustable via
 SCPTmaxSendTime,
 SCPTminSendTime and
 UCPTminDeltaLux

Configuration parameters

Parametrization of network variables

SCPTmaxSendTime Maximum period of time between sending two telegrams
 Type: SNVT_time_sec (SCPT #49)
 Range of values: 0 ... 6553 Seconds
 Presetting: 0 Seconds {0}

UCPTminDeltaLux Minimum of absolute value change causing the value to be re-sent
 Type: SNVT_lux (UCPT #144)
 Range of values: 0 – 65335 lux
 Presetting: 0 lux {0}

SCPTminSendTime Minimum transmission interval before re-sending a value
 Type: SNVT_time_sec (SCPT #52)
 Range of values: 0 No periodic resend
 0,5 - 6553,0 Seconds
 Presetting: No periodic resend {0}

Parametrization of functional object

UCPTconfig Only used by Plug-in
State

Type: unsigned short
(UCPT #195)

Range of values: 0 - 255

Presetting: 255 {255}

SCPTgain Gain for input signal
(to balance variances
depending on installation
conditions)

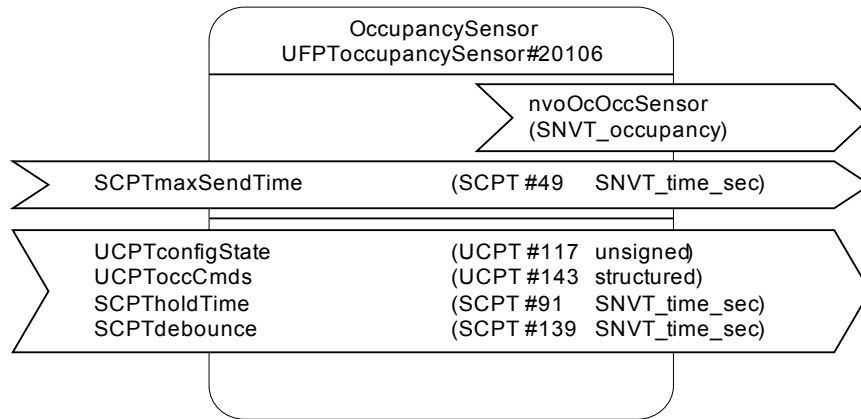

Type: SNVT_muldiv
(SCPT #31)

Range of values: .multiplier: Reference value
1 ... 65535 lux
.divisor: Sensor value
1 ... 65535 lux

Presetting: 1/1 {1, 1}

1.4.3 Presence detection

Network interface

Network variables

`nvoOccSensor` occupation of the room
 Type: SNVT_occupancy
 Range of values: 0 OC_OCCUPIED
 room occupied
 1 OC_UNOCCUPIED
 room unoccupied
 2 OC_BYPASS
 room temporary occupied
 3 OC_STANDBY
 room temporary
 unoccupied
 Presetting: OC_UNOCCUPIED {0}
 Transmission: on change and cyclic
 depending on
 SCPTmaxSendTime

Configuration properties

Parametrization of network variables

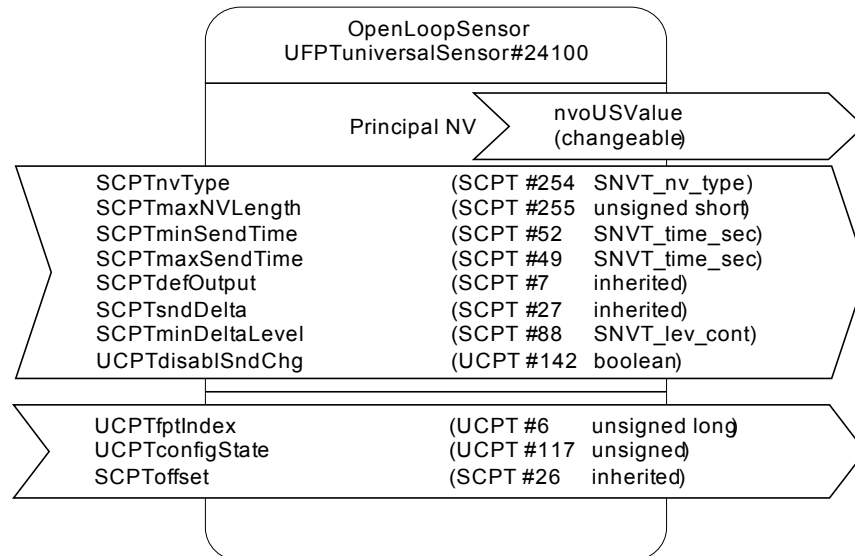

`SCPTmaxSendTime` Maximum period of time
 between sending two
 telegrams
 Type: SNVT_time_sec
 (SCPT #49)
 Range of values: 0 ... 6553,4 Seconds
 Presetting: 0 Seconds {0}

Parametrization of functional object

UCPTconfig State	Only used by Plug-in	UCPToccCmds	used telegramm values
Type:	unsigned short	Type:	structured (UCPT #143)
Range of values:	0 - 255	Range of values:	.cmd_on / .cmd_off :
Presetting:	255 {255}		0 OC_OCCUPIED room occupied
SCPTholdTime	Hold time for occupied state after there is no occupancy detected		1 OC_UNOCCUPIED room unoccupied
Type:	SNVT_time_sec (SCPT #91)		2 OC_BYPASS room temporary occupied
Range of values:	0 ... 6553,4 Seconds		3 OC_STANDBY room temporary unoccupied
Presetting:	60 seconds {600}	Presetting:	occupied on switch on and unoccupied on switch off {0,1}
SCPTdebounce	debounce time for sensor		
Type:	SNVT_time_sec (UCPT #139)		
Range of values:	0 ... 6553,4 Sek.		
Presetting:	10 sek {100}		

1.4.4 Universal sensor

Network interface

Network variables

nvoUSValue Output for sensor values
 Type: Changeable
 Default type: SNVT_temp_p
 Presetting: SCPTdefOutput
 Transmission: adjustable via
 SCPTmaxSendTime
 SCPTminSendTime

Configuration properties

Parametrization of network variables

SCPTnvType	Type of the network variable	SCPTminSendTime	zeitlicher Mindestabstand zwischen 2 Telegrammen
Type:	structure (SCPT #254)	Validity:	for nvoUSValue
Range of values:	Supported NV-types	Type:	SNVT_time_sec (SCPT #52)
Presetting:	SNVT_setting {0,0,0,0,0,0,0,0,0,105, NVT_CAT_SIGNED_LO NG,2,1L,-2L,0L}	Range of values:	0 ... 6553,4 Seconds
		Presetting:	0,1 Second {1}
SCPTmaxNVLength	Maximum length of the network variable (constant)		
Type:	unsigned short (SCPT #255)		
Range of values:	2 Byte {2}		

<p>SCPTmax SendTime</p> <p>Validity: for <i>nvoUSValue</i> Type: SNVT_time_sec (SCPT #49)</p> <p>Range of values: 0 ... 6553,4 Seconds Presetting: 0,0 Seconds {0}</p>	<p>Maximum period of time between sending two telegrams</p>	<p>SCPTdef Output</p> <p>Type: inherited from <i>nvoUSValue</i> Range of values: SNVT_setting Presetting: 0/OFF {SET_OFF, 0.0, 0.00}</p>	<p>Default value for <i>nvoUSValue</i></p>
<p>UCPTdisabl SndChg</p> <p>Type: boolean (UCPT #5)</p> <p>Range of values: 0 send cyclic and sufficient value changes 1 send only cyclic Presetting: send cyclic and changes {0}</p>	<p>Suppress sending of value changes out of cycle</p>	<p>SCPTsnd Delta</p> <p>Type: inherited from <i>nvoUSValue</i> Range of values: SNVT_temp_p Presetting: 0 {0.00}</p>	<p>Minimum of absolute value change causing the value to be re-sent</p>
		<p>SCPTmin DeltaLevel</p> <p>Type: SNVT_lev_cont (SCPT #88) Presetting: 0 % {0.0}</p>	<p>Minimum of relative value change causing the value to be re-sent</p>

Parametrization of functional object

<p>UCPTftpIndex</p> <p>Type: unsigned long (UCPT #6)</p> <p>Range of values: 65535 No profile selected 20101 Temperature sensor 20105 Air quality sensor 20110 Relative humidity sensor Presetting: No Profile selected {65535}</p>	<p>Index of selected function/profile</p>	<p>UCPTconfig State</p> <p>Type: unsigned short (UCPT #177)</p> <p>Range of values: - Presetting: -</p>	<p>only used by plug-in</p>
		<p>SCPToffset</p> <p>Type: inherited (UCPT #26)</p> <p>Range of values: SNVT_temp_p Presetting: 0 {0,00}</p>	<p>Measurement offset to calibrate the sensor</p>

1.4.5 Operating module

Network interface

Network variables

<p>nviCmSpaceTemp Room temperature to show on display Type: SNVT_temp_p Range of values: SNVT_temp_p Presetting: Invalid value {32767}</p>	<p>nviCmUnitStatus Room temperature controller states for synchronization and display Type: SNVT_hvac_status Range of values: SNVT_hvac_status Presetting: Invalid values {HVAC_NUL, 32767, 32767, 32767, 32767, 32767, 255}</p>
<p>nviCmOccupancy Occupancy feedback for synchronization of toggle buttons and for display Type: SNVT_occupancy Range of values: SNVT_occupancy Presetting: Invalid value {OC_NUL}</p>	<p>nviCmSync Feedback from spega SpaceComfortController and synchronization between spega CommandModul objects Type: UNVT_scc_sync Range of values: UNVT_scc_sync Presetting: Invalid values {32767, HVAC_NUL, HVAC_NUL, 32767, 32767, 255, 255, 255, 255, 255, 255, 255, 255}</p>
<p>nviCmSetptOffset Setpoint offset feedback for synchronization and display Type: SNVT_temp_p Range of values: SNVT_temp_p Presetting: Invalid value {32767}</p>	

<p>nvoCmSpaceTemp</p> <p>Temperature measurement value</p> <p>Type: SNVT_temp_p</p> <p>Range of values: SNVT_temp_p</p> <p>Presetting: Invalid value {32767}</p> <p>Transmission: via <i>SCPTmaxSendTime</i> and <i>UCPTtempMode</i></p>	<p>nvoCmFanSpeed</p> <p>Manual fan stage</p> <p>Type: SNVT_switch</p> <p>Range of values: { x, 1} Stage values x = <i>UCPTfan-Config.level_n</i></p> <p>{ 0.0, -1} Automatic {127.5, -1} Invalid value</p> <p>Presetting: Invalid value {0xFF, 0xFF}</p>
<p>nvoCmSetptOffset</p> <p>Manual setpoint offset</p> <p>Type: SNVT_temp_p</p> <p>Range of values: parametrized at <i>UCPTstptRange</i></p> <p>Presetting: Invalid value {32767}</p>	<p>nvoCmSync</p> <p>control for spega SpaceComfortController and synchronization between spega CommandModul objects</p> <p>Type: UNVT_scc_sync</p> <p>Range of values: UNVT_scc_sync</p> <p>Presetting: Invalid value {32767, HVAC_NUL, HVAC_NUL, 32767, 32767, 255, 255, 255, 255, 255, 255, 255, 255}</p>
<p>nvoCmManOcc</p> <p>Manual occupancy</p> <p>Type: SNVT_occupancy</p> <p>Range of values: <i>UCPToccCmds.cmd_on</i> <i>UCPToccCmds.cmd_off</i></p> <p>Presetting: Invalid value {OC_NUL}</p>	

Configuration parameters

Parametrization of the network variables

<p>SCPTmaxSendTime</p> <p>Maximum period of time between sending two telegrams</p> <p>Type: SNVT_time_sec (SCPT #49)</p> <p>Range of values: 0,0 ... 6553,4 Seconds</p> <p>Presetting: 0,0 Seconds {0}</p>	<p>UCPTtempMode</p> <p>use of temperature value, influencing the sending behavior of temperature</p> <p>Type: enumeration (UCPT #91)</p> <p>Range of values: 1 TM_AVERAGE for use on average only cyclic sending 2 TM_INTERNAL as simply value send each change and cyclic if needed 255 TM_NUL sensor not used</p> <p>Presetting: simpel value {2}</p>
--	---

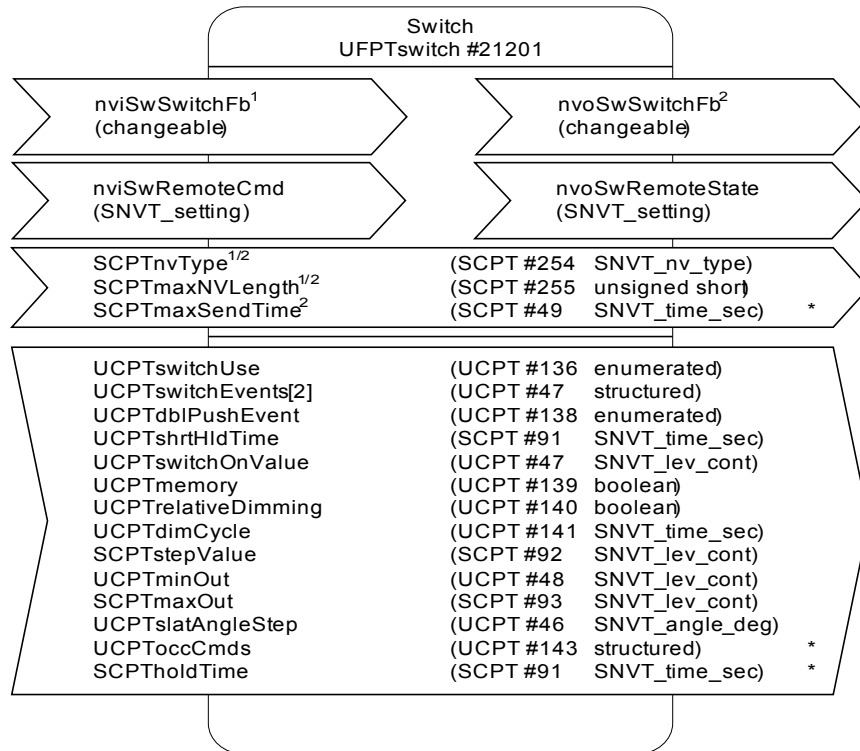

Parametrization of the object

<p>UCPTconfigState</p> <p>only used by Plug-in</p> <p>Type: unsigned (UCPT #117)</p> <p>Range of values: -</p> <p>Presetting: -</p>	<p>SCPToffsetTemp</p> <p>Measurement offset for temperature to calibrate the sensor</p> <p>Type: SNVT_temp_p (SCPT #70)</p> <p>Range of values: -5,00°C - +5,00°C</p> <p>Presetting: 0,00°C</p>
---	---

<p>UCPToccCmdOn Occupancy telegram on occupancy Type: SNVT_occupancy (UCPT #50) Range of values: 0 OC_OCCUPIED Room occupied 2 OC_BYPASS Room temporary occupied Presetting: Room occupied {0}</p>	<p>UCPTfanConfig Selectable fan stages Type: structured (UCPT #146) Range of values: .enable_auto 0 FALSE AUTO not used 1 TRUE AUTO selectable .enable_off 0 FALSE OFF not used 1 TRUE OFF selectable .level_1/.level_2/.level_3 0,0% Stage not used 0,5 - 100,0% Used value for the stage Presetting: AUTO an OFF selectable and 3 stages {TRUE, TRUE, 33.0%, 66.5%, 100,0%}</p>
<p>UCPTstptRange Range and increment for setpoint adjustment Type: structured (UCPT #145) Range of values: .min_range -5,00°C – 0,00°C .max_range 0,00°C - +5,00°C .step 0,5 K – 1,0 K Presetting: range of -3,00 to +3,00°C with increments of 0,5 K {-300, +300, 50}</p>	

1.4.6 Switch

Network interface

Network variables

nviSwSwitchFb Feedback input
 Type: Changeable
 - SNVT_switch
 - SNVT_setting
 Default type: SNVT_setting
 Range of values : Depends on nv type
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

nviSwRemoteCmd Simulation input
 Type: SNVT_setting
 Range of values : SNVT_setting
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

nvoSwSwitch Value output
 Type: Changeable
 - SNVT_switch
 - SNVT_setting
 - SNVT_occupancy*
 Default type: SNVT_setting
 Range of values : Depends on nv type
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

Transmission: Adjustable via
 SCPTmaxSendTime

* This NV-typ is only selectable on devices with binary inputs

nvoSwRemote State Feedback of actual input state
 Type: SNVT_setting
 Range of values : SNVT_setting
 Presetting: 0/OFF
 {SET_OFF, 0.0, 0.00}

Configuration properties

SCPTmax Maximum length of the network variable (read only)
 NVLength **Parametrization of network variables**

Type: unsigned short (SCPT #255)
 Presetting: 4 Byte {4}

SCPTnvType Type of network variable
 Type: Structure (SCPT #254)
 Range of values : supported NV-types
 Presetting: SNVT_setting

SCPTmaxSend Maximum time between two telegrams
 Time
 Validity: for nvoSwSwitch
 Type: SNVT_time_sec (SCPT #48)

Range of values : 0 – 6553,4 Seconds
 Presetting: 0 Seconds {0}

* This NV-typ is only selectable on devices with binary inputs

Parametrization of functional object

UCPTswitch Only used by plug-in
 Use
 Type: unsigned short (UCPT #195)

UCPTdblPush Event for parallel pressing of both assigned buttons
 Event
 Type: enumerated
 Range of values : see UCPTswitchEvents
 Presetting: no Event selected {EV_NO_MSG}

UCPTshrtHld Time limit between short and long hold action
 Time
 Type: SNVT_time_sec (UCPT #91)
 Range of values : 0,1 – 30,0 Seconds
 Presetting: 0,5 Seconds

UCPTswitchOn Switch on value
 Value
 Type: SNVT_lev_cont (UCPT #47)
 Range of values : 0,0 – 100,0 %
 Presetting: ON with 100% {100.0}

SCPTstepValue value step for dimming / drive
 Type: SNVT_lev_cont (SCPT #92)
 Range of values : 0,0 – 100,0 %
 Presetting: 10% {20}

UCPTslatAngle angle step for slat turning
 Step
 Type: SNVT_angle_deg (UCPT #46)
 Range of values : -90,00° - +90,00°
 Presetting: 10,00° {500}

UCPTswitch Events [2]
 Type: array of structured
 Structure: for each button:
 .push short pressing
 .hold long pressing
 .release release after short pressing
 .release_late release after long pressing

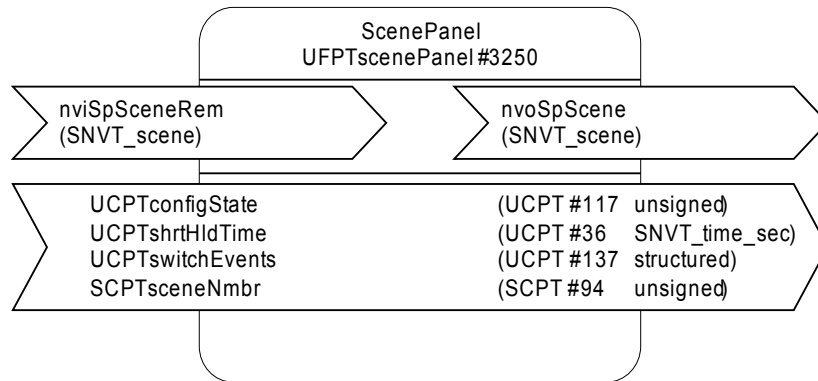

Range of values : for each element/action:
 -1 EV_NULL send invalid
 0 EV_OFF switch off
 1 EV_ON switch on
 2 EV_DIM_DOWN dimm down
 3 EV_DIM_UP dimm up
 4 EV_STOP send stop
 5 EV_SB_DOWN drive sunblind down
 6 EV_SB_UP drive sunblind up
 7 EV_SLAT_DOWN turn slat down
 8 EV_SLAT_UP turn slat up
 9 EV_TOGGLE toggle
 10 EV_DIM dimm toggle
 11 EV_SB_TOGGLE drive toggle
 14 EV_NO_MSG send no message
 Vorbelegung: send no messages

UCPTrelative decides the usage of relative dimming with NV-type SNVT_setting
 Dimming
 Type: boolean

	(UCPT #140)	memory for last switch on value
Range of values :	0 BOOL_FALSE no relative dimming 1 BOOL_TRUE use relative dimming	Type: boolean (UCPT #139)
Presetting:	use relative dimming {BOOL_TRUE}	Range of values : 0 FALSE send UCPTswitchOnValue 1 TRUE send memorised switch on value
UCPTminOut	lower limit for dimming and switching	Presetting: no memory use {0}
Type:	SNVT_lev_cont (UCPT #48)	
Range of values :	0,0 ... 100,0%	UCPToccCmds* Switch On and switch of values for NV-type SNVT_occupancy
Presetting:	0% {0}	Type: structured (UCPT #143)
SCPTmaxOut	upper limit for dimming and switching	Range of values : .cmd_on / .cmd_off SNVT_occupancy
Type:	SNVT_lev_cont (SCPT #93)	Presetting: 'room occupied' on switch on and 'room unoccupied' on switch of {OC_OCCUPIED, OC_UNOCCUPIED}
Range of values :	0,0 ... 100,0%	* This parameter is only available on devices with binary inputs
Presetting:	100% {200}	
UCPTdimmm Cycle	Dimming cycle (Update rate on dimming)	SCPTholdTime* hold time for switch on state of binary input
Type:	SNVT_time_sec	Type: SNVT_time_sec
Range of values :	0,0 No dimming 0,5-6553,4s Cycle time	Range of values : 0,0 No hold time 0,5-6553,4s Hold time
Presetting:	0,5 s {5}	Presetting: 0,5 s {5}
		* This parameter is only available on devices with binary inputs
UCPTmemory	decides the usage of	

1.4.7 Scene Panel

Network interface

Network variables

<p>nviSpSceneRem Scene input for remote scene buttons Type: SNVT_scene Range of values: SNVT_scene Presetting: Invalid scene command {0, 0}</p>	<p>nvoSpScene Scene output Type: SNVT_scene Range of values: SNVT_scene Presetting: Invalid scene command {0, 0}</p>
--	---

Configuration parameters

<p>UCPTconfig State Only used by Plug-in Type: unsigned short (UCPT #117) Range of values: 0 - 255 Presetting: 255 {255}</p>	<p>UCPTswitch Events Actions on push, reaching short hold time and releasing assigned buttons Type: array of structured (UCPT #137) Structure: For two buttons .push Pushing .hold reaching short hold time .release Releasing before short hold time reached .release_late Releasing after short hold time reached Range of values: For each element 12 EV_SCENE_RCL Recall scene 13 EV_SCENE_LRN Learn scene 14 EV_NO_MSG No action Presetting: No actions</p>
<p>UCPTshrtHld Time Time threshold between the short and long hold function of the buttons Type: SNVT_time_sec (UCPT #36) Range of values: 0,1 – 30,0 Seconds Presetting: 0,5 Seconds</p>	
<p>UCPTenable RemoteCtrl Activation of scene buttons on remote control Type: boolean {UCPT #103} Range of values: 0 FALSE Buttons inactive 1 TRUE Buttons active Presetting: Buttons inactive {0}</p>	

UCPTsceneTo Allocation of scene
Button numbers to scene buttons

Type: structured
{UCPT #16}

Range of values: For each element:
0 No valid number
1 – 255 Scene number

Presetting: No valid numbers
{0 ... 0}

SCPTsceneNmbr Scene number of first
scene button on remote
control

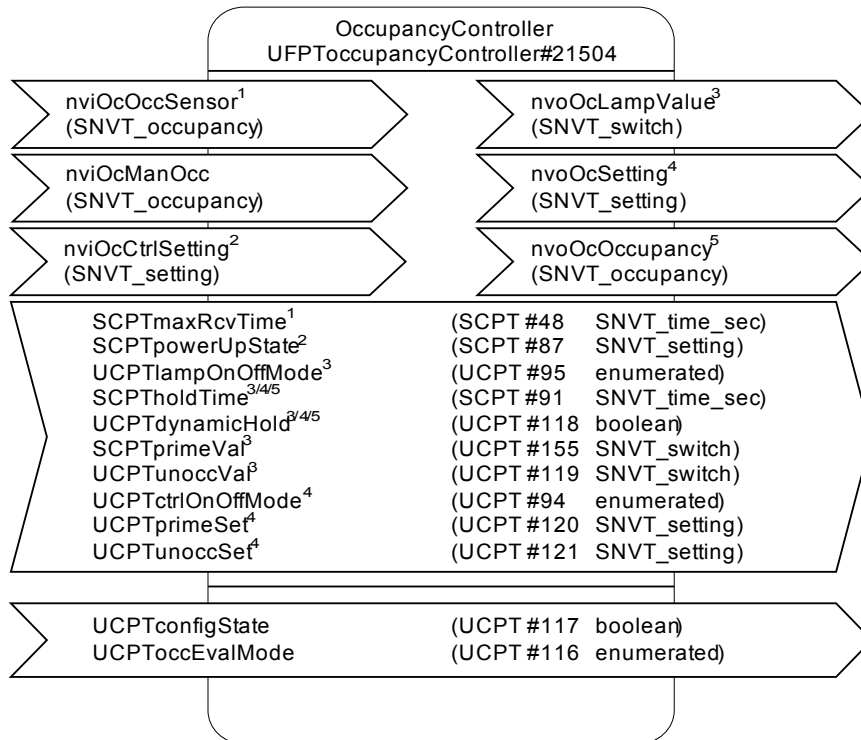

Type: unsigned
{SCPT #94}

Range of values: 0 No valid number
1 – 255 Scene number

Presetting: No valid number {0}

1.4.8 Occupancy control

Network interface

Network variables

<p>nviOcOcc Sensor Occupancy status of the room (sensor input)</p> <p style="padding-left: 40px;">Type: SNVT_occupancy</p> <p style="padding-left: 40px;">Range of values: 0 OC_OCCUPIED Room occupied 1 OC_UNOCCUPIED Room unoccupied</p> <p style="padding-left: 40px;">Presetting: Room unoccupied {1}</p>	<p>nviOcManOcc Occupancy status of the room (manual input)</p> <p style="padding-left: 40px;">Type: SNVT_occupancy</p> <p style="padding-left: 40px;">Range of values: -1 OC_NUL Invalid value 0 OC_OCCUPIED Room occupied 1 OC_UNOCCUPIED Room unoccupied 2 OC_BYPASS Room temporary occupied 3 OC_STANDBY Room temporary unoccupied</p> <p style="padding-left: 40px;">Presetting: Room unoccupied {1}</p>

UCPTfan Sequences	Selection of regulation sequences for fan control	UCPTairQual Mode	Selection of air quality control
Type:	enumerated (UCPT #317)	Type:	enumerated (UCPT #284)
Range of values:	0 HEAT Heating sequence 1 COOL Cooling sequence 2 HEAT_COOL Heating & cooling sequence	Range of values:	0 OFF No air quality control 1 OCC occupancy depended air quality control 2 IAQ continuous air quality control
Presetting:	Heating & cooling sequence {2}	Presetting:	occupancy depended air quality control {1}
UCPTdisc Levels	Fan stage count	UCPTairQual Delay	Follow-up time for air quality control after the room occupation changes to unoccupied
Type:	unsigned short (UCPT #112)	Type:	SNVT_time_sec (UCPT #318)
Range of values:	0 continuous fan 1 – 3 stage count	Range of values:	0 No follow-up time 1 – 6553 Seconds
Presetting:	Fan with 3 stages {3}	Presetting:	No follow-up time {0}
UCPTfanHyst	Hysteresis steps for temperature depended fan regulation		
Type:	SNVT_temp_p (UCPT #131)		
Range of values:	0,50 K – 4,00 K		
Presetting:	0,50 K {50}		

<p>UCPTairQual Params</p> <p>Type: structured (UCPT #285)</p> <p>Range of values: <i>.v_min / .v_max</i> 0,0% - 100,0% with: <i>.v_min < .v_max</i> <i>.co2_limit / .co2_max</i> 100 ppm – 2000 ppm with <i>.co2_limit < .co2_max</i></p> <p>Presetting: Minimum position 20% Maximum position 100% Lower limit 600 ppm higher limit 1000 ppm {40, 200,600, 1000}}</p>	<p>Air quality limits and position range for air quality control</p>	<p>UCPTdelta TempNight</p> <p>Type: SNVT_temp_p (UCPT #282)</p> <p>Range of values: 0,50 K – 10,00 K</p> <p>Presetting: 2,00 K {200}</p>	<p>Minimum temperature difference of outdoor air temp for night purge via outdoor air</p>
<p>UCPTnight PurgeMode</p> <p>Type: enumerated (UCPT #286)</p> <p>Range of values: 0 OFF 1 DAMPER via central air condition 2 DAMPER_FAN via fancoil with outdoor air damper 3 WINDOW via window</p> <p>Presetting: No night purge {0}</p>	<p>Selection of actuators used for night purge</p>	<p>UCPTsetting HystHigh</p> <p>Type: SNVT_setting (UCPT #106)</p> <p>Range of values: SNVT_setting</p> <p>Presetting: open {SET_DOWN, 100.0, 0.00}</p>	<p>Open command for window</p>
		<p>UCPTsetting HystLow</p> <p>Type: SNVT_setting (UCPT #107)</p> <p>Range of values: SNVT_setting</p> <p>Presetting: close {SET_UP, 100.0, 0.00}</p>	<p>Close command for window</p>

1.4.11 Thermal control

Network interface

Network variables

<p>nviThOutdoor Lux Outdoor brightness</p> <p>Type: SNVT_lux</p> <p>Range of values: 0 – 65535 lux</p> <p>Presetting: 0 lux</p>	<p>nviThOccupancy Actual room occupancy</p> <p>Type: SNVT_occupancy</p> <p>Range of values: 0 OC_OCCUPIED Room occupied 1 OC_UNOCCUPIED Room unoccupied 2 OC_BYPASS Comfort extension 3 OC_STANDBY Room in standby</p> <p>Presetting: Room unoccupied {1}</p>
<p>nviThSpaceTemp Room temperature</p> <p>Type: SNVT_temp_p</p> <p>Range of values: 0,00°C – 60,00°C</p> <p>Presetting: 20,00°C {2000}</p>	<p>nvoThCtrl State Feedback of controller activity</p> <p>Type: SNVT_switch</p> <p>Range of values: { 0, 0} Thermal control inactive {200, 1} Thermal control active</p> <p>Presetting: Inactive {0, 0}</p>
<p>nviThCtrl Setting Control input for activation and deactivation of the controller</p> <p>Type: SNVT_setting</p> <p>Range of values: .state -1 SET_NUL Automatic 0 SET_OFF Deactivation 1 SET_ON Activation</p> <p>Presetting: SCPTpowerupState</p>	

nvoThSetting Sunblind operating commands to support heating/cooling
 Type: SNVT_setting
 Range of values: {SET_NUL, 0.0, 0.00}
 No valid command/
 priority reset
 And values from
UCPTthermoCtrlConfig
 Presetting: No valid command
 {SET_NUL, 0.0, 0.00}

Configuration parameters

Parametrization of the network variables

<p>SCPTmaxRcvTime Maximum time for receiving sensor values on <i>nviThOccupancy</i>, used to combine telegrams from different sources with an OR-function Type: SNVT_time_sec (SCPT #48) Range of values: 0 – 6553 Seconds Presetting: 0 Seconds {0}</p>	<p>SCPTmaxSendTime Maximum period of time between sending two telegrams on <i>nvoThSetting</i> Type: SNVT_time_sec (SCPT #49) Range of values: 0 No periodic re-sent 1 - 6553 Seconds Presetting: No periodic re-sent {0}</p>
<p>SCPTpowerUpState Status of the controller after power restoration Type: SNVT_setting Range of values: See <i>nviThCtrlSetting</i> Presetting: Automatic {SET_NUL, 0.0, 0.00}</p>	

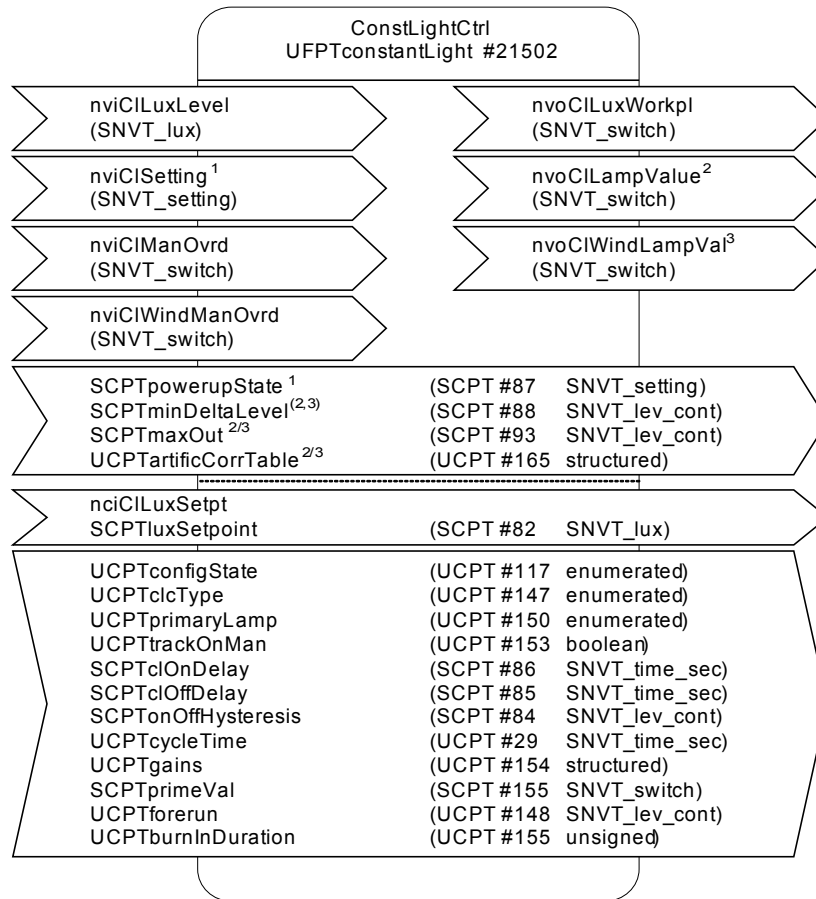

Parametrization of the object

<p>UCPTconfigState Only used by Plug-in Type: unsigned short (UCPT #195) Range of values: 0 - 255 Presetting: 255 {255}</p>	<p>UCPTluxHystHigh Activation treshold value of light intensity Type: SNVT_lux Range of values: 0 - 65535 lux Presetting: 20000 lux {20000}</p>
<p>SCPTsetPnts Setpoints for heat/cool support, can be changed via <i>nciThSetpoints</i> Type: SNVT_temp_setpt Range of values: Only .occupied_x relevant, each element: 0,00°C – 50,00°C Presetting: Comfort cool setpoint 23°C Comfort heat setpoint 21°C {2300, 0, 0, 2100, 0, 0}</p>	<p>UCPTluxHystLow Deactivation treshold value of light intensity Type: SNVT_lux Range of values: 0 - 65535 lux Presetting: 5000 lux {5000}</p>
	<p>UCPTThystOnDelay Delay on activation Type: SNVT_time_min Range of values: 0 - 360 Minutes Presetting: 10 Minutes {10}</p>

<p>UCPT_{hystOff} Delay</p> <p style="padding-left: 40px;">Type: SNVT_time_min</p> <p style="padding-left: 40px;">Range of values: 0 - 360 Minutes</p> <p style="padding-left: 40px;">Presetting: 20 Minutes {20}</p>	<p>Delay on deactivation</p>	<p>UCPT_{thermo} CtrlConfig</p> <p style="padding-left: 40px;">Type: structured</p> <p style="padding-left: 40px;">Range of values: Each element: SNVT_setting</p> <p style="padding-left: 40px;">Presetting: Top end position for heat support, bottom end position with closed slat for cool support and priority reset on deactivation {SET_STATE,0,0}, {SET_STATE,200,-2250}, {SET_NUL,0,0}</p>	<p>Sunblind operating commands</p>
<p>UCPT_{tempHyst} High</p> <p style="padding-left: 40px;">Type: SNVT_temp_p</p> <p style="padding-left: 40px;">Range of values: 0,5 K - 5,00 K</p> <p style="padding-left: 40px;">Presetting: 1 K {100}</p>	<p>Temperature hysteresis</p>
